WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public.

It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product.

Products powered by electricity should be serviced or repaired only by experienced professional technicians.

Any attempt to service or repair the product or products dealt within this service information by anyone else could result in serious injury or death.

SAFETY PRECAUTIONS

1 CAUTION:

No modification of any circuit should be attempted. Service work should only be performed after you are thoroughly familiar with all of the following safety checks and servicing guide lines.

2 SAFETY CHECK

Care should be taken while servicing this CRT display because of the high voltage used in the deflection circuits. These voltages are exposed in such areas as the associated flyback and yoke circuits.

3 FIRE & SHOCK HAZARD

- 3-1 Insert an isolation transformer between the CRT display and AC power line before servicing the chassis.
- 3-2 In servicing pay attention to original lead dress especially in the high voltage circuit. If a short circuit is found, replace all parts which have been overheated as a result of the short circuit.
- 3-3 All the protective devices must be be reinstalled per original design.
- 3-4 Soldering must be inspected for possible cold solder joints, frayed leads, damaged insulation, solder splashes or sharp solder points. Be certain to remove all foreign material.

4 LEAKAGE CURRENT COLD CHECK

- 4-1 Unplug the AC cord and connect a jumper between the two prongs on the plug.
- 4-2 Turn the CRT display power switch "on".
- 4-3 Measure the resistance value with an ohmmeter between the jumpered AC plug and each exposed metallic part on the CRT display such as the metal frame, screwheads, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be 1.8 megohm minimum.

5 LEAKAGE CURRENT HOT CHECK

- 5-1 Plug the AC cord directly into the AC outlet. Do not use an isolation transformer during this check.
- 5-2 Connect a 1500 ohm, 10 watt resistor, paralleled by a 0.15 μ F capacitor between each exposed metallic part and a good earth ground (as shown in Fig. 1).
- 5-3 Use an AC voltmeter with 1000 ohm/volt or more sensitivity and measure the AC voltage across the combination 1500 ohm resistor and 0.15 μ F capacitor.
- 5-4 Move the resistor connection to each exposed metallic part and measure the voltage.
- 5-5 Reverse the polarity of the AC plug in the AC outlet and repeat the above measurement.
- 5-6 Voltage measured must not exceed 7.5 volt RMS, from any exposed metallic part to ground. A leakage current tester may be used in the above hot check, in which case any current measured must not exceed 5.0 milliamp. In the case of a measurement exceeding the 5.0 milliamp value, a rework is required to eliminate the chance of a shock hazard.

Note: High voltage is present when this CRT display is operating. Always discharge the anode of the picture tube to the display chassis to prevent shock hazard.

Fig.1

6 IMPLOSION PROTECTION

Picture tubes are equipped with an integral implosion protection system, but care should be taken to avoid damage and scratching during installation. Use only Panasonic replacement picture tubes.

7 X-RADIATION

WARNING : The only potential source of X-Radiation is the picture tube. However when the high voltage circuitry is operating properly there is no possibility of X-Radiation problem. The basic precaution which must be exercised is to keep the high voltage at the following factory-recommended level.

Note: It is important to use an accurate periodically calibrated high voltage meter.

- 7-1 The procedure for adjustment high voltage is as shown on page 27.
- 7-2 If can not be adjust 25.0 kV at immediate service is required to prevent the possibility of premature component failure.
- 7-3 To prevent X-Radiation possibility it is essential to use the specified picture tube.

IMPORTANT SAFETY NOTICE

There are special components used in this CRT displays which are important for safety. These parts are identified by the international symbol  on the schematic diagram and on the replacement parts list. It is essential that these critical parts should be replaced with manufacture's specified parts to prevent X-RADIATION, shock, fire or other hazards. Do not modify the original design or this will void the original parts and labor guarantee.

GENERAL INFORMATION

1. OUTLINE

TX-D1733 is a 17 inch multi-scan color CRT display with the following features.

- Multi scan • Digital control • OSD (On Screen Display) control • Power saving • High contrast and fine dot pitch CRT

2. FEATURES

2-1 Power Saving

- This monitor is equipped with power management circuitry conforming to the VESA standard.
- Depending on the signal from a computer, switching occurs between four modes to minimize non-essential energy consumption.

2-2 OSD (on screen display) function

- OSD (5 languages) is a man-machine interface. Any one is able to set up the picture as he like through OSD menu.

2-3 Self Test function

- With a touch of a button (**1**) the self-test function quickly identifies a "no signal condition." This time saving function simplifies diagnostics and prevents unnecessary service calls.

2-4 Power Supply with high power factor

- Power Supply with high power factor enables to utilize AC power efficiently meeting IEC555-2 (Line Harmonics).

2-5 Ergonomic design

- Low emission design to meet MPR II
- ESF (Electro static field) free coating on CRT

2-6 Multi scan with digital technology

- 8 bit micro computer controls the circuit operation to meet with wide range signal of $f_H=30\sim69$ kHz and $f_V=50\sim160$ Hz. So VGA640x350, VGA640x400, VGA640x480, SVGA800x600, 1024x768 and 1280x1024 mode are applicable.

2-7 3 Factory presets, (+ 5 Reservation), 13 user memories.

- 3 standard modes are preset at the factory.
- 5 modes are reserved at the factory.
- 13 user memories are available to set the users own timing and display information.

2-8 Flat Face and fine dot pitch

- Flat face CRT with a fine dot pitch of 0.27 mm provides for comfortable viewing.

2-9 Superior display performance

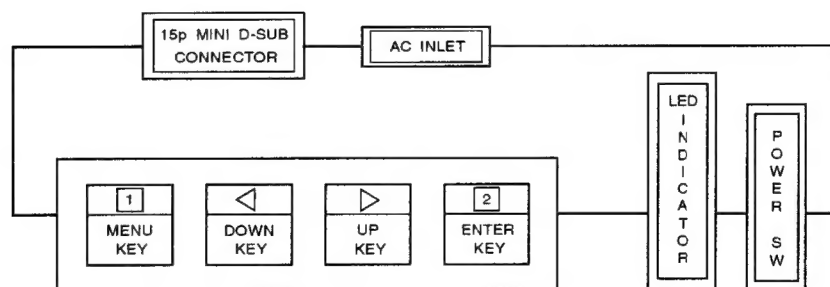

- Good focus by sophisticated gun and dynamic focus circuit
- High contrast CRT (TM=42.5%)
- Minimized distortion by correction circuit
- Good convergence
- Full scan image for graphics

2-10 Plug and Play

- VESA/DDC1 (Display Data Channel) compatible

SPECIFICATION

1. DIAGRAM

1.1 POWER SW, LED, **1**-key (MENU), \triangleleft -key (DOWN), \triangleright -key (UP), and **2**-key (ENTER) are located on the front panel.

1.2 Signal connector and AC inlet are located on the back side of the cabinet.

1.3 OSD menu includes the following function.

CONTRAST	BRIGHTNESS	DEGAUSS
H POSITION	H SIZE	V POSITION
V SIZE	V PIN-CUSHION	TRAPEZOID
PARALLELOGRAM	COLOR SELECT	

DISPLAY FREQUENCY LANGUAGES VIDEO INPUT LEVEL RECALL.

※) CONTRAST can be directly controlled with $\triangleleft/\triangleright$ -key.

※) With sync signal, OSD menu appears by pushing **1**-key.

Without sync signal, self test menu appears by pushing **1**-key.

2. MECHANICAL SPECIFICATIONS

..... refer to the attached drawing

- 2.1 Dimension Height : 415 mm (16.3") typ.
 Width : 410 mm (16.1") typ.
 Depth : 438 mm (17.2") typ.

- 2.2 Net Weight : 17.0 kg (37.4 lbs) typ.

3. CONNECTORS

- 3.1 Signal connector: 15P Mini D-Sub connector
 3.2 AC inlet: CEE 22 typed connector

<15P Mini D-Sub Pin assignment>

4. CRT SPECIFICATIONS

Part No.	M41KXH140X
Type	17", 90°, 29ø, in-line gun (15.7" Viewable)
Dot Pitch	0.27 mm
Phosphor	R, G, B Short Persistence (Hi-Eu RED)
CIE Color point	Red x: 0.635 (± 0.020) y: 0.333 (± 0.020) Green x: 0.280 (± 0.020) y: 0.595 (± 0.020) Blue x: 0.152 (± 0.015) y: 0.063 (± 0.015)
Bulb	DARK TINT
Face	NEW AGRAS COAT
Total Transmission	42.5 %

5. ELECTRICAL SPECIFICATIONS

5.1 Standard conditions ... Except special items

Display image	Green, full "H" characters with a border line. (7 x 9 dots) Video signal : 100% duty Display area : 300 mm x 225 mm
Video signal level	0.7 Vpp
Contrast, Brightness	Contrast : Max., Brightness : detent point
Ambient Temperature	20±5°C (68 ± 9°F)
Input Voltage	AC 120 V, 60 Hz
Terrestrial magnetism	Vertical field : northern hemisphere field (40μT) Horizontal field : no field
Viewing direction	Parallel to the CRT axis
Measurements	After an initial warming up time of more than 30 minutes.
Ambient light	200±50 lx
Display mode	1024 x 768 (60.02 kHz, 75.03 Hz)

5.2 POWER

5.2.1 Power supply ... Commercial power source

Input voltage	AC 90 - 132 V, AC 198 - 264 V
Power frequency	50/60 Hz
Input current	1.5 A Max. (100V) (※1)
Inrush current (at 20° C)	40 A op
Power consumption	100 W (Typ.)

(※1) Input current is reduced to about 60 % our current products by "High Power Factor" technology.

5.2.2 Power Management for Power Saving ...

Power saving system is designed based upon VESA DPMS standard (Version : 1.0)

1) Power consumption and recovery time.

*1 APM State	SIGNALS			MONITOR POWER CONSUMP- TION	RECOVERY TIME TO ON STATE	INDICATOR
	H. Sync	V. Sync	VIDEO			
ON	*3 NOR- MAL	*3 NOR- MAL	*2 ACTIVE	*4 100%	—	Green
STAND- BY	No Sync or *5 < 6 kHz	> 40 Hz	BLANK	< 30 W	< 4s	Yellow
SUS- PEND	>10 kHz	No Sync or *5 < 20 Hz	BLANK	< 30 W	< 4s	Yellow
OFF	No Sync or *5 < 6 kHz	No Sync or *5 < 20 Hz	BLANK	< 8 W	< 20s	Yellow

** The transition time from ON state to each APM state is 5 seconds minimum.

*1 : APM : Advanced Power Management.

*2 : Meas. Condition of power consumption for ON state.

DISPLAY IMAGE : WHITE full "H" characters with a border line (7 × 9 dots).

*3 : NORMAL : See "7.4 ACCEPTABLE TIMING".

*4 : Power Consumption is measured at AC 100-240V.

*5 : Power saving operation is done at least less than specified value in the list.

5.3 Standard timing (Standard mode)

- Following total 3 modes (5 modes) are preset (reserved) in the memory as standard timing at the factory.
- Fig-1 shows a definition of timing and signal level.
- Electrical performance is specified This SPECIFICATION is specified at STD (1024 x 768) mode unless otherwise mentioned. (MODE-2)

TIMING CHART

FOR PRESET

		MODE - 1	MODE - 2	MODE - 3
		640 × 480 (60)	1024 × 768 (75)	1280 × 1024 (60)
DOT CLOCK		25.1745 MHz	78.7500 MHz	109.4695 MHz

SYNC POLARITY(H/V)		Negative / Negative

5.4 Acceptable timing

- If your timing is within following specification, this CRT display can automatically function with a certain size and position.

Horizontal: Sync frequency: 30.0 ~ 69.0 kHz
 Blanking Time: $\geq 3.0 \mu\text{s}$
 Back Porch: $\geq 1.25 \mu\text{s}$
 Front Porch: \leq Back Porch
 Sync Width: $\geq 1.2 \mu\text{s}$

Vertical: Sync frequency: 50.0 ~ 160.0 Hz
 Blanking Time: $\geq 0.5 \text{ ms}$
 Back Porch: $\geq 0.4 \text{ ms}$
 Sync Width: $\geq 0.045 \text{ ms}$

- Several items like size, position and distortion can be adjusted through OSD menu, and if you want to keep it, please push the key  for memory, or keep the key untouched for about 20 seconds, it is automatically memorized.

NOTE : In case of RECALL, the key is untouched for about 30 seconds, RECALL function will be cancelled.

Please note, however, that there is the case you can not get the size and/or position you want, (for example, in case Display video Time is too short, you can't get bigger size of the image.)

- The CRT adopted in this CRT display is designed to minimize the moire phenomenon at suitable size for typical display modes. However, there might be a display format among many formats, in which the moire phenomenon appears on this display.

5.5 Signal level and input impedance

5.5.1 Video Signal level

This CRT display is adjusted at the factory using 0.7V p-p Video Signal, Black level is 0V.

5.5.2 Sync Signal level

- H/V Separate, H/V Mixed : TTL level
- Sync on Green : 0.3 V p-p

5.5.3 Input impedance

- Video input: 75Ω
- Sync input: $\geq 1 \text{ k}\Omega$

5.6 Display performance

5.6.1 Display area

1) PRESET TIMING

	(MODE 1 & 2)	(MODE 3)
WIDTH	$300 \text{ mm} \pm 5 \text{ mm}$	$286 \text{ mm} \pm 5 \text{ mm}$
HEIGHT	$225 \text{ mm} \pm 5 \text{ mm}$	$229 \text{ mm} \pm 5 \text{ mm}$

5.6.2 Centering

1) PRESET TIMING (MODE1~3)

$$|A - B| \leq 5 \text{ mm}$$

$$|C - D| \leq 5 \text{ mm}$$

5.6.3 Distortion

1) Trapezoid

$$\left| \frac{AC - BD}{AC + BD} \right| \times 100 \leq 1 \%$$

$$\left| \frac{AB - CD}{AB + CD} \right| \times 100 \leq 1 \%$$

2) Parallelogram

$$a, b \leq 2 \text{ mm}$$

3) Pincushion and Barrel

$$|c1|, |c2| \leq 2.5 \text{ mm}$$

$$|d1|, |d2| \leq 2.5 \text{ mm}$$

5.6.4 Rotation

$$|H1 - H2| \leq 2.2 \text{ mm}$$

5.6.5 Linearity

Horizontal linearity

$$= \frac{X_{\text{max.}} - X_{\text{min.}}}{X_{\text{max.}} + X_{\text{min.}}} \times 100 \% \leq 6 \%$$

Vertical linearity

$$= \frac{Y_{\text{max.}} - Y_{\text{min.}}}{Y_{\text{max.}} + Y_{\text{min.}}} \times 100 \% \leq 5 \%$$

<Conditions>

Display image ----- crosshatch pattern

Maximum and minimum values should not be adjacent to each other.

X max. is maximum value among X1~Xm

X min. is minimum value among X1~Xm

Y max. is maximum value among Y1~Yn

Y min. is minimum value among Y1~Yn

5.7 General performance

5.7.1 Video output

Bandwidth	86 MHz (Typ.)
-----------	---------------

5.7.2 Maximum luminance

Value	120 cd/m ² (Typ.) for 5% white field at the center of the display area. 110 cd/m ² (Typ.) for 100% white field at the center of the display area. Specified by 9300 K + 27 MPCD
Conditions	Display image : White full flat field Luminance : Max. (Contrast : Max.) (Brightness : Detent point)

5.7.3 Minimum luminance

Value	≤ 26 cd/m ² at the center of the display area. Specified by 9300 K + 27 MPCD
Conditions	Display image : White full flat field Luminance : Min. (Contrast : Min.) (Brightness : Detent point)

5.7.4 Brightness variation

Value	70 % (Min.) Variation = C/A X 100
Conditions	Display image : White full flat field Luminance : MAX (Contrast : MAX) (Brightness : Detent point) A ; Luminance at center position C ; Luminance at position of lowest brightness

5.7.5 Display area regulation

	Display area variation	Range of variation
Due to Luminance	within 1.5 % of display area	26~110 cd/m ² (white flat field)
Due to Power Supply	within 1.5 % of display area	AC : 90-132 V or 180-264 V
Due to Temperature	within 2 % of display area	0 - 40° C (fh=30-65 kHz)

5.7.6 Color Point

< Conditions >

Display image : White flat field at the center of the display area.

Luminance : Brightness Detent point.

Contrast	max	min
Value	9300 K + 27 MPCD $x = 0.281 \pm 0.020$ $y = 0.311 \pm 0.020$	9300 K + 27 MPCD $x = 0.281 \pm 0.020$ $y = 0.311 \pm 0.020$

5.7.7 Misconvergence

Center area of display (A) : 0.3 mm (Max.)

Corner area of display (B) : 0.4 mm (Max.)

<Conditions>

Display image : Crosshatch pattern mixed with R, G and B colors.

Convergence gauge : KLEIN CM7AG or equivalent.

Display area : W x H 300 x 225 mm

5.7.8 Purity

Conspicuous mislanding shall not be visible within display area at a distance of 60cm from CRT surface.

<Conditions>

Display image : White flat field

Luminance : Contrast max, Brightness Detent point.

5.7.9 Jitter

Invisible at a distance of 60 cm from CRT surface.

6. ENVIRONMENTS

6.1 Ambient temperature, humidity and altitude

	Operating	Storage and shipment
Temperature	0 ~ 40° C * ¹ (fh = 30-65 kHz)	-20 ~ +60° C (-4 ~ 140° F)
Humidity	5 ~ 90 % * ²	5 ~ 90 % * ²
Altitude	3,000 m (Max.) (10,000 ft)	12,000 m (Max.) (40,000 ft)

*¹ 0 ~ 35° C for 66 ~ 69 kHz

*² Non-condensation

6.2 Vibration and shock

6.2.1 Vibration

	Order of tests	Direction of vibration		Acceleration		Frequency	Sweep	Test time		
				Non-operation	Storage and shipment					
Unpacked	1	Vertical	Up to down	2.9 m/s ² (0.3 G)		5 - 55 Hz	120 s	30 min.		
	2	Horizontal	Front to back					15 min.		
	3		Right to left							
Packed	1	Vertical	Up to down		10m/s ² (1.0 G)	5 - 50 Hz	810 s Logsweep	40 min.		
	2	Horizontal	Front to back		5 m/s ² (0.5 G)			20 min.		
	3		Right to left							

6.2.2 Shock (Drop test)

Unpacked	20 G One time for each face (6 faces) (non-operation)			
Packed	Order of drop	Face to drop is to face the floor. (See the figure)	Height	Number of drop
	1	a, b, c, d, e, g	40 cm	1 time for each
	2	f	55 cm	

7. REGULATORY STANDARDS

7.1 Safety standards

Applicable standards

UL 1950, Listing

CSA 22.2 No. 950, Products Certification

TüV (IEC-950)/GS (ZH1)

DHHS, 21 CFR subchapter J, X-Ray Radiation

PTB, X-Ray Radiation, Approval

HWC

NORDIC

Energy Star

<EMI test pattern>

White, full "H" characters (9 x 14 dots), block (12 x 24 dots) "H" character font is as follows:

7.2 EMC standards

Designed to meet following standards

VCC I class II

FCC: FCC part 15, subpart B, class-B

VDE 0878/06.83

Vfg 243/1991

CISPR22 class B

MPR- II Radiation

8. POWER CORD

UL and CSA approved AC power cord is put in packaged. Length : 2.0 meter (6.56 feet) if you use in other country (for example Germany), please use a power cord approved by safety agency of each country (VDE in Germanu).

9. SIGNAL CABLE

Signal cable with Mini D-Sub 15P connectors at both end is put in package.

Length : 1.5 meter (4.93 feet)

10. COLOR CRT DEFECTIVE STANDARD

10.1 Specification of screen blemishes

This instruction is applied to inspection of the screen faults and of the glass quality of the faceplate.

10.2 Test procedure

10.2.1 Tests are to be done under the following two conditions:

- (a) With a blanked white raster at 80 μ A.
- (b) With incident light (white light of 700 - 1000 lux at the center of the screen; tube is not operated).

10.2.2 Viewing distance should be 60 cm minimum. Faults not visible at this viewing distance are permitted.

10.2.3 The Following quality areas are specified:

Zone A: Rectangular area (sides X and Y) of which the point of intersection of the diagonals coincides with the mechanical center of the screen.

Zone B: The remaining screen area except zone A.

Specifie zone is applied to glass faceplate defects.

10.2.4 Remarks concerning faults:

a) Unless otherwise specified, the size of a fault is the smallest value found with one of the two formulas:

$$\frac{a+b}{a}, \frac{a}{20} + 2b \quad (a = \text{length}, b = \text{width})$$

b) For entirely or partially missing and/or non-fluorescent phosphor dots hold the following definitions:

Entire defect: Remaining part is not more than 50% of the complete dot.

Partical defect: Remaining part is between 50% and 75% of the complete dot.

10.3 Permissible limit

10.3.1 Screen faults

Missing phosphor dots, black spots, filled mask holes and copper stains

	Screen size	
	X	Y
Zone A	293 mm	219 mm

Size of defects				Max. permis- sible number	Min. permissible distance between defects	Max. permissible number in circle of ϕ 50 mm
Entire defects	A	A1	3 adjacent trios or more	0	—	—
		A2	3 adjacent same color dots or more	0		
		A3	More than 6 adjacent dots	0		
	B	B1	2 adjacent trio	0	—	—
		B2	4 or 5 adjacent dots	0		
		B3	2 adjacent same color dots	1		
	C	C1	1 trio	1	20 mm	—
		C2	2 adjacent different color dots	2		
		C3	1 dot	7		
	B + C			—	20 mm	—
Partial defects	D	Partial defects		—	—	5
Total pieces of defects excluding partial defects				7	—	—

— Entire defects having separation less than min. permissible distance are defined as an adjacent defects.

— Defects of remaining part more than 75% is ignored, except for concentration having diameter more than ϕ 8 mm.

10.3.2 Glass faceplate defects

(A) Air bubbles, open bubbles, stones and elongated air bubbles.

Area		Zone A	Zone B
Permissible major defects	Air Bubble. (average dia.)		0.51 – 0.70 mm
	Spot and open air bubble (average dia.)		0.41 – 0.60 mm
	Maximum Permissible number	Each zone	1
		Total	2
	Minimum allowable distance among defects		57 mm
Permissible defects within any 50 m-dia,-circle	Air Bubble. (average dia.)		0.25 – 0.50 mm
	Spot and open air bubble (average dia.)		12.7 mm
	Max. permissible number		2
	Δ Minimum allowable distance among defects		0.20 – 0.40 mm
Δ Δ Elongated air bubble (permissible size)		Width	0.10 – 0.20 mm
		Length	4.0mm

Δ This is also applied to the distance to major defects.

Δ Δ This should be evaluated by its average diameter, and then relevant standards of air bubble are applied except number of defects for each zone, minimum distance among defects and maximum limit of average diameter.

(B) Scratches

Width (mm)	Maximum allowable length (mm)
< 0.05	permitted
0.05 - 0.10	25.4
0.11 - 0.15	12.7
> 0.15	rejected

(C) Other defects not stated above such as chips, cracks, bruises, shear marks, clouds and polished patterns are not allowed when they substantially spoil appearance, viewed from the viewing distance.

DIMENSIONS

DISASSEMBLY INSTRUCTIONS

1. Rear cover removal

Note: Spread a mat underneath to avoid damaging the CRT surface.

- 1) Remove four large screws ① and small screw ② from the rear cover.
- 2) Remove the cover.
- 3) Remove eight screws ③ from the shield case.
- 4) Remove the shield case.

2. Video PCB removal

- 1) Remove four screws ④ securing the shield cover.
- 2) Desolder (B) and Remove the shield cover (A).

- 3) Loosen the screw ⑤ securing the CRT neck and the shield case.
- 4) Remove the PCB block from the CRT.
- 5) Desolder and remove the N382B connector ⑥.
- 6) Remove two focus leads ⑦ after pulling up the focus lead securing lever.
- 7) Remove ground connector ⑧ (N106) connected to the PCB.
- 8) Remove two flexible PCBs ⑩.
- 9) Remove N104B connector ⑨.
- 10) Remove the PCB from the shield case.

3. Main PCB Removal

- 1) Remove the connector ⑪ (N802) of the degauss coil.
- 2) Remove the DY connector ⑫.
- 3) Remove the anode cap.
- 4) Remove two ground connector ⑬.
- 5) Move the CRT face down and remove two screws ⑭ securing the bottom fitting metal.
- 6) Remove the fitting metal and the PCB from the cabinet.
- 7) Remove eight screws ⑮ securing the fitting metal and PCB.
- 8) Remove the PCB ⑯ with the figure referenced.

CONTROL LOCATION

Basic operation of parts

Control panel

Names of control

Functions

* For a detailed description of the functions of the [1] key, ◀ key, ▶ key, and [2] key, refer to the next section onward.

Examples of on-screen operation

A. Contrast adjustment

Display changes

Steps of operation

On-screen display changes

1. Display the contrast adjustment menu using the ◀ key or ▶ key.

2. Set the desired state using the ◀ key or ▶ key. If the [1] key is pressed, the set data is stored in the memory and the menu screen is cleared.

B. H. size adjustment

Display changes

Steps of operation

On-screen display changes

1. Call the main menu on the screen by pressing the [1] key.

2. Move to cursor to H. SIZE using the ◀ key or ▶ key, then press the [2] key to select.

3. Set the desired state using the ◀ key or ▶ key. If the [1](EXIT) key is pressed, the set data is stored in the memory and the menu screen is cleared.

Main menu

CAUTION FOR ADJUSTMENT AND REPAIR

1. Degaussing is inevitably required at purity adjustment or convergence adjustment.
2. If you check or adjust electrical specification or function, more than 20 minutes burn-in is required.
3. Reforming of the lead wire is required after your repair work.
4. Prior to starting work, be sure to check that the input signal is at the specified timing and that the polarity is as specified in all modes.
5. Brightness control: After mounting the rear cover, brightness tends to decrease about 5 cd/m² on a flat white field and about 1 cd/m² on a white raster field. This should be taken into consideration.
6. Brightness stabilizing time: It takes about 20 to 50 seconds for the brightness to stabilize after turning the power off for 5 seconds (AC). Therefore, care should be taken to this.
7. Aging should be made in white raster of 30 ~ 50 cd/m² and raster size, 320 x 240 mm before adjusting the ITC.
8. Set the CONTRAST to MAX and BRIGHTNESS to CENTER using the O.S.D.

CAUTION FOR SERVICING

When servicing or replacing the CRT, high voltage sometimes remains on the anode. So, completely discharge high voltage before servicing or replacing the CRT so as to prevent a shock to the service person.

CRT Anode Discharge

1. When you check the CRT anode or replace the CRT, discharge the CRT anode to the external conductive coating (aquadag) of CRT, especially when checked right after power turn-off.
2. Ground one end of a jumper wire which has a resistor (30 kV < resisting pressure 100 MΩ) and connect the other point to the CRT anode.

Note: *Grounding must be done first.*

This model has a section that does not share a common ground with the power supply section. The different sections are referred to as the HOT section and the COLD section in the precautions below.

1. Do not touch the HOT section and the COLD section at the same time. You may be hit by an electric shock.
2. Do not short the HOT section to the COLD section. This could blow the fuse or damage parts.
3. Never measure the HOT section and the COLD section at the same time when using tools such as oscilloscopes or multimeters.
4. Always unplug the unit before beginning any operation such as removing the chassis.

ADJUSTMENT AND CHECK PROCEDURE

INTRODUCTION

- This monitor is controlled by a microcomputer. With the exception of purity/convergence/focus all is digitally adjusted.

Therefore a computer, the dedicated control software, the dedicated interface, a 9~12 V power supply, and a signal generator are required servicing.

TOOLS REQUIRED

Computer

The control software is IBM PC compatible only. Therefore, it is not compatible with any other operating systems. For further information please contact our sales office.

Control Software

The HV5 chassis can only use "TXD1733 adjustment program disk". No other program can access the EEPROM on the monitor. For further information please contact our sales office.

Interface

The interface is dedicated to work only with the control software and the HV chassis. There are no substitutes for this interface. For further information please contact our sales office.

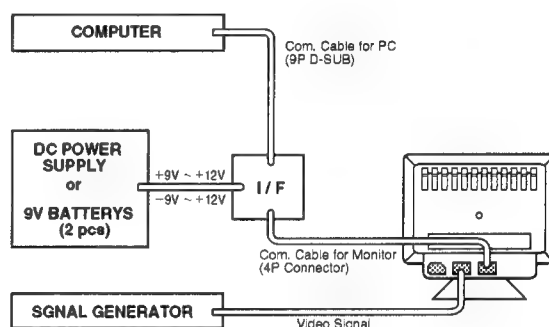

Power Supply

A DC 9~12 V (+9~12 V/-9~12 V) power supply is required for operating the interface.

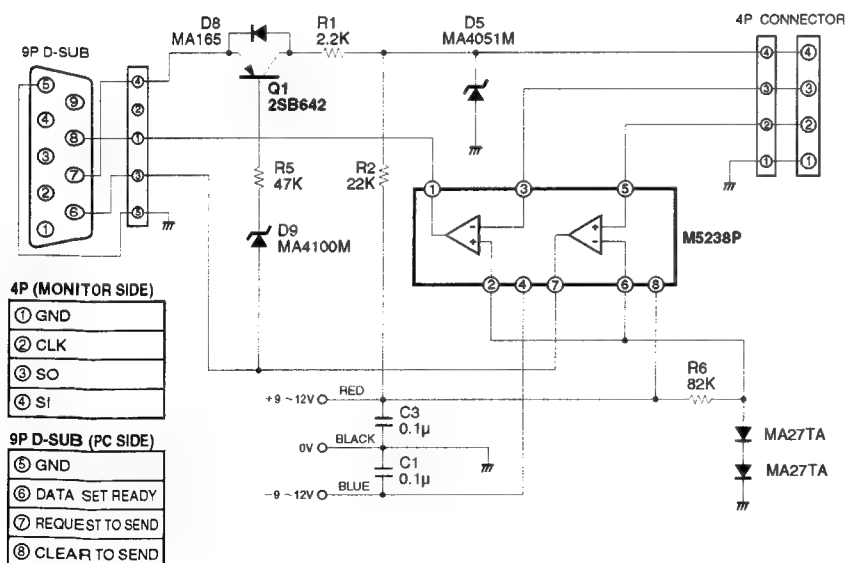

Signal Generator

It is necessary for you to use a signal generator which operates on fh 82 kHz, fv 160 Hz, and fc 135 MHz bands.

INTERFACE CONNECTION

INTERFACE SCHEMATIC DIAGRAM

BATTERY CONNECTION

OTHER TOOLS

- Oscilloscope (dual trace)
- Scope probe – Attenuation: 100:1
Attenuation: 10:1
- Digital Voltmeter – Range: 0 to 1000 V DC
Accuracy: 0.1 %
- TV color Analyzer II – that reads luminance and chromaticity X and Y coordinates.
- Digital High Voltmeter
- AC power supply – Output voltage : 0 to 300 V
- Degaussing coil
- Convergence meter
- Scale
- Double-faced scale
- Microscope – Scale factor: 50
- White racquer (Paint)

STANDARD CONDITION OF ADJUSTMENT PROCEDURE

- Signal timing : Standard timing 1024 x 768
(See page 5)
- Display pattern : White, full "H" character
- Signal level : V/H: TTL level video: 700 mV
- Input source : AC 120 V, 60 Hz
- Ambient temperature : Room temperature
- Warm-up time : More than 30 minutes
- Brightness control : Center
- Contrast control : Max.
- Magnetic field : Vertical: 40 μ T
Horizontal: 0 μ T
- Signal cable : Attached

Video input signal from PC.

- Use a Helmholtz device to adjust an unit with no horizontal magnetic field and a vertical field of 40 μ T. Inspect the unit under the same conditions.
- The ambient illuminance must be 200 lux.
- Use an external degaussing coil any time the DEGAUSS switch does not remove color shading.
- To check the image width, height, linearity and distortion, proceed as below.

Measure level with respect to tube axis.

ADJUSTMENT SOFTWARE

1. Software operating procedure

- A) Power on the computer.
- B) Connect the Communication cable for monitor adjustment.
- C) Insert the adjustment disk into the drive.
- D) At the A:> prompt type "VSR", then press [ENTER].

A function to identify the connected monitor is provided to prevent accidents due to erroneous use of the HV5 chassis program. If this program is used for any monitor other than the HV5, the message reading "This monitor is not an HV5 chassis. All further activity has been prevented" is displayed and the operation is stopped.

- E) Refer to the adjustment procedures.

2. Adjustment Program

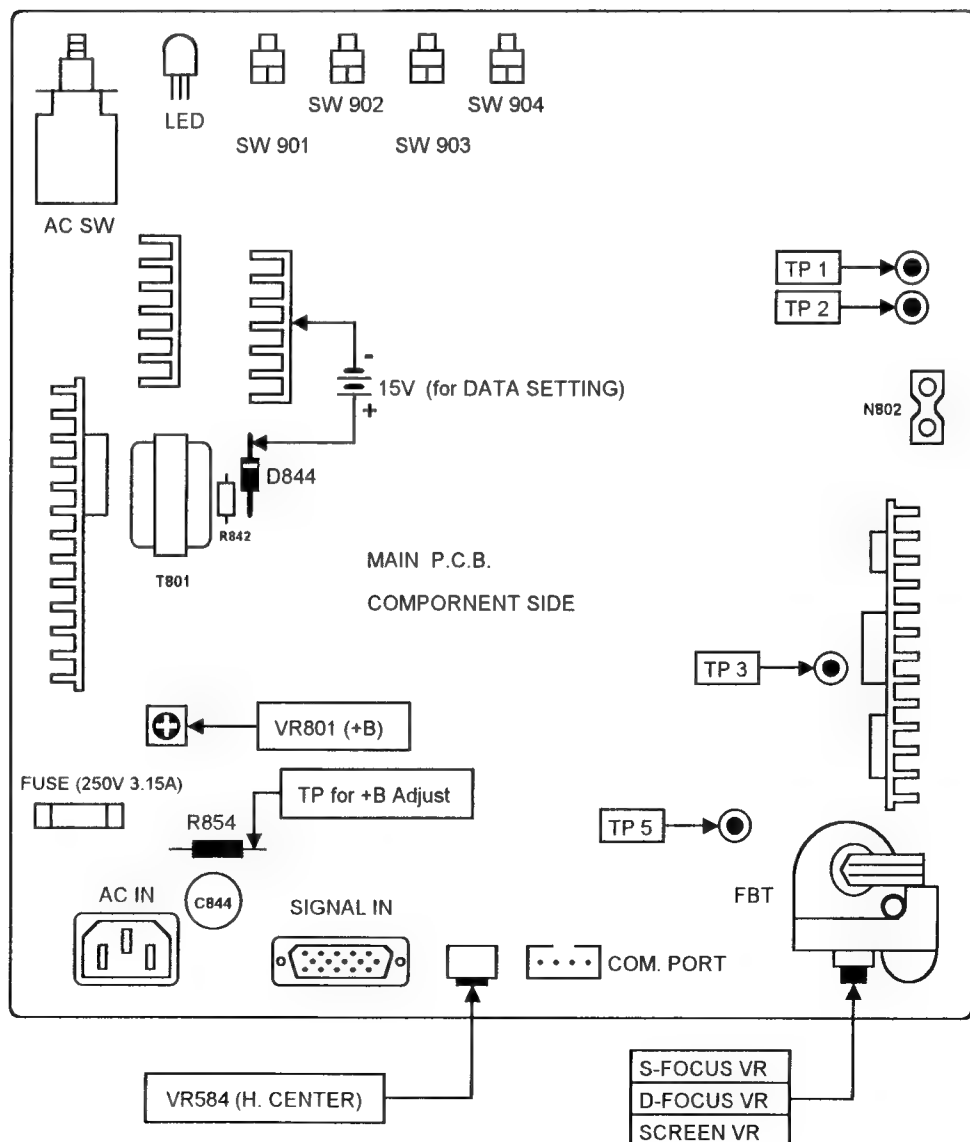

Main Menu of Adjustment Program

<<HV5 ADJUST PROGRAM MAIN MENU>> (e: exit) <Ver *.*>		
1) Load data from FILE	6) Clear User preset	
2) Adjust H. OSC freerun	7) Save data to FILE	
3) Adjust VSR setting	8) Special ADJUST	
4) Adjust OTHER setting	9) Information Service	
5) Adjust Factory preset	10) Show Version & Error	

Description of Function of Each Menu

- 1) **Load Data from File**
This transfers the data file from the disk to the EEPROM on the monitor.
- 2) **Adjust H. OSC Freerun**
To guarantee that the full range of horizontal frequencies operate correctly. The reference oscillation frequency should be set.
- 3) **Adjust VSR Setting**
To guarantee that the full range of horizontal frequencies operate correctly. The reference voltage and the distortion offset data should be set.
- 4) **Adjust Other Setting**
This is used to control the brightness and color.
- 5) **Adjust Factory Preset**
Makes adjustments to the factory presets. This data is also referenced when in modes other than the preset mode.
- 6) **Clear User Preset**
Clear the data written in the user preset domain. There is no data in the user presets when the product shipped from the factory.
- 7) **Save Data to File**
Transfers the data from the EEPROM on the monitor to a data file on a floppy disk or hard drive. The data file can be named anything as long as it is less than 8 characters long.
- 8) **Special Adjust**
This menu has the following functions
 - ① Related data is automatically set on the basis of adjustment results to save the time for adjustment.
(Example: Color adjustment applies only to the 9300 K, while 6550 K and user color data are automatically set.)
 - ② To prevent operation errors in changes of various type of control flags, these flags are automatically returned to the default settings (Final Tune).
- 9) **Information Service**
Displays the H/V frequencies that is being supplied to the monitor and gives the operational status of the monitor.
- 10) **Show Version and Error**
Shows the version of the microprocessor that is in the monitor. Also, if there is an error in the operation of the monitor.
The error is displayed on the screen of the PC.

ADJUSTMENT PROCEDURE

1. Description of Adjustment Method

ITEM Program Menu		◇ Test Meter ▼ Test Point □ Pattern	JOB CODE	Input Signal	Operation	Adjusting Value	
A	STANDARD DATA SETTING 1) Load data from FILE	▼ D844 - GND Refer to service adjustment control location on page 23	A1		Do not connect the power and signal cable to monitor.		
			A2		Apply 15V to D844 CATHODE and GND. (Do not apply 5V to IC901. Because IC876 supply 5V and RESET signal to IC901)		
			A3		Set the cell to the menu at left and press  .		
			A4		A message FILE -> EEPROM FILE NAME (q or Q escape) [] : is displayed. So key in the DACDATA.DAT (when using the standard data) and press  .		
			AE		Disconnect 15V cable, then turn on the power switch of the monitor.		
Do not load standard data except when Main P.C.B. and EEPROM are replaced.							
B	+B ADJUST	◇ Digital voltmeter ▼ R854 Refer to service adjustment control location on page 23	B1 B2	Mode-2	Check that the input signal to the monitor is [fH 60.0KHz] and [fV 75.0Hz] and press  Make the adjustment to the value shown at right by turning the VR801 on the main PCB.	98V +2 / -1V	
C	H. FREE RUN 2) Adjust H. OSC freerun	□ Crosshatch	C1 C2		Set the cell to the menu at left and press  Set the cell to the adjusting mode <u>INTP [0]</u> and press  .	 ↓ 	
			C3 C4		HV5-1		Check that the input signal to the monitor is [fH 29.5KHz] and [fV 48.0Hz] and press  When the screen image has stabilized, press  to return to menu of C2.
			C5 C6	HV5-2	Input signal [fH 39.0KHz] and [fV 77.1Hz] Select Adjusting mode <u>INTP [1]</u> , and repeat above procedure.		
			C7 C8	HV5-3	Input signal [fH 54.0KHz] and [fV 105.0Hz] Select Adjusting mode <u>INTP [2]</u> , and repeat above procedure.		
			C9 C10	HV5-4	Input signal [fH 70.0KHz] and [fV 165.0Hz] Select Adjusting mode <u>INTP [3]</u> , and repeat above procedure.		
			CE		Press  to return to main menu.		

Note 1 : Check to be sure that the program disk name is **TXD1733** before making necessary adjustment.

Note 2 : Unless otherwise specified, the monitor state is as given at right.

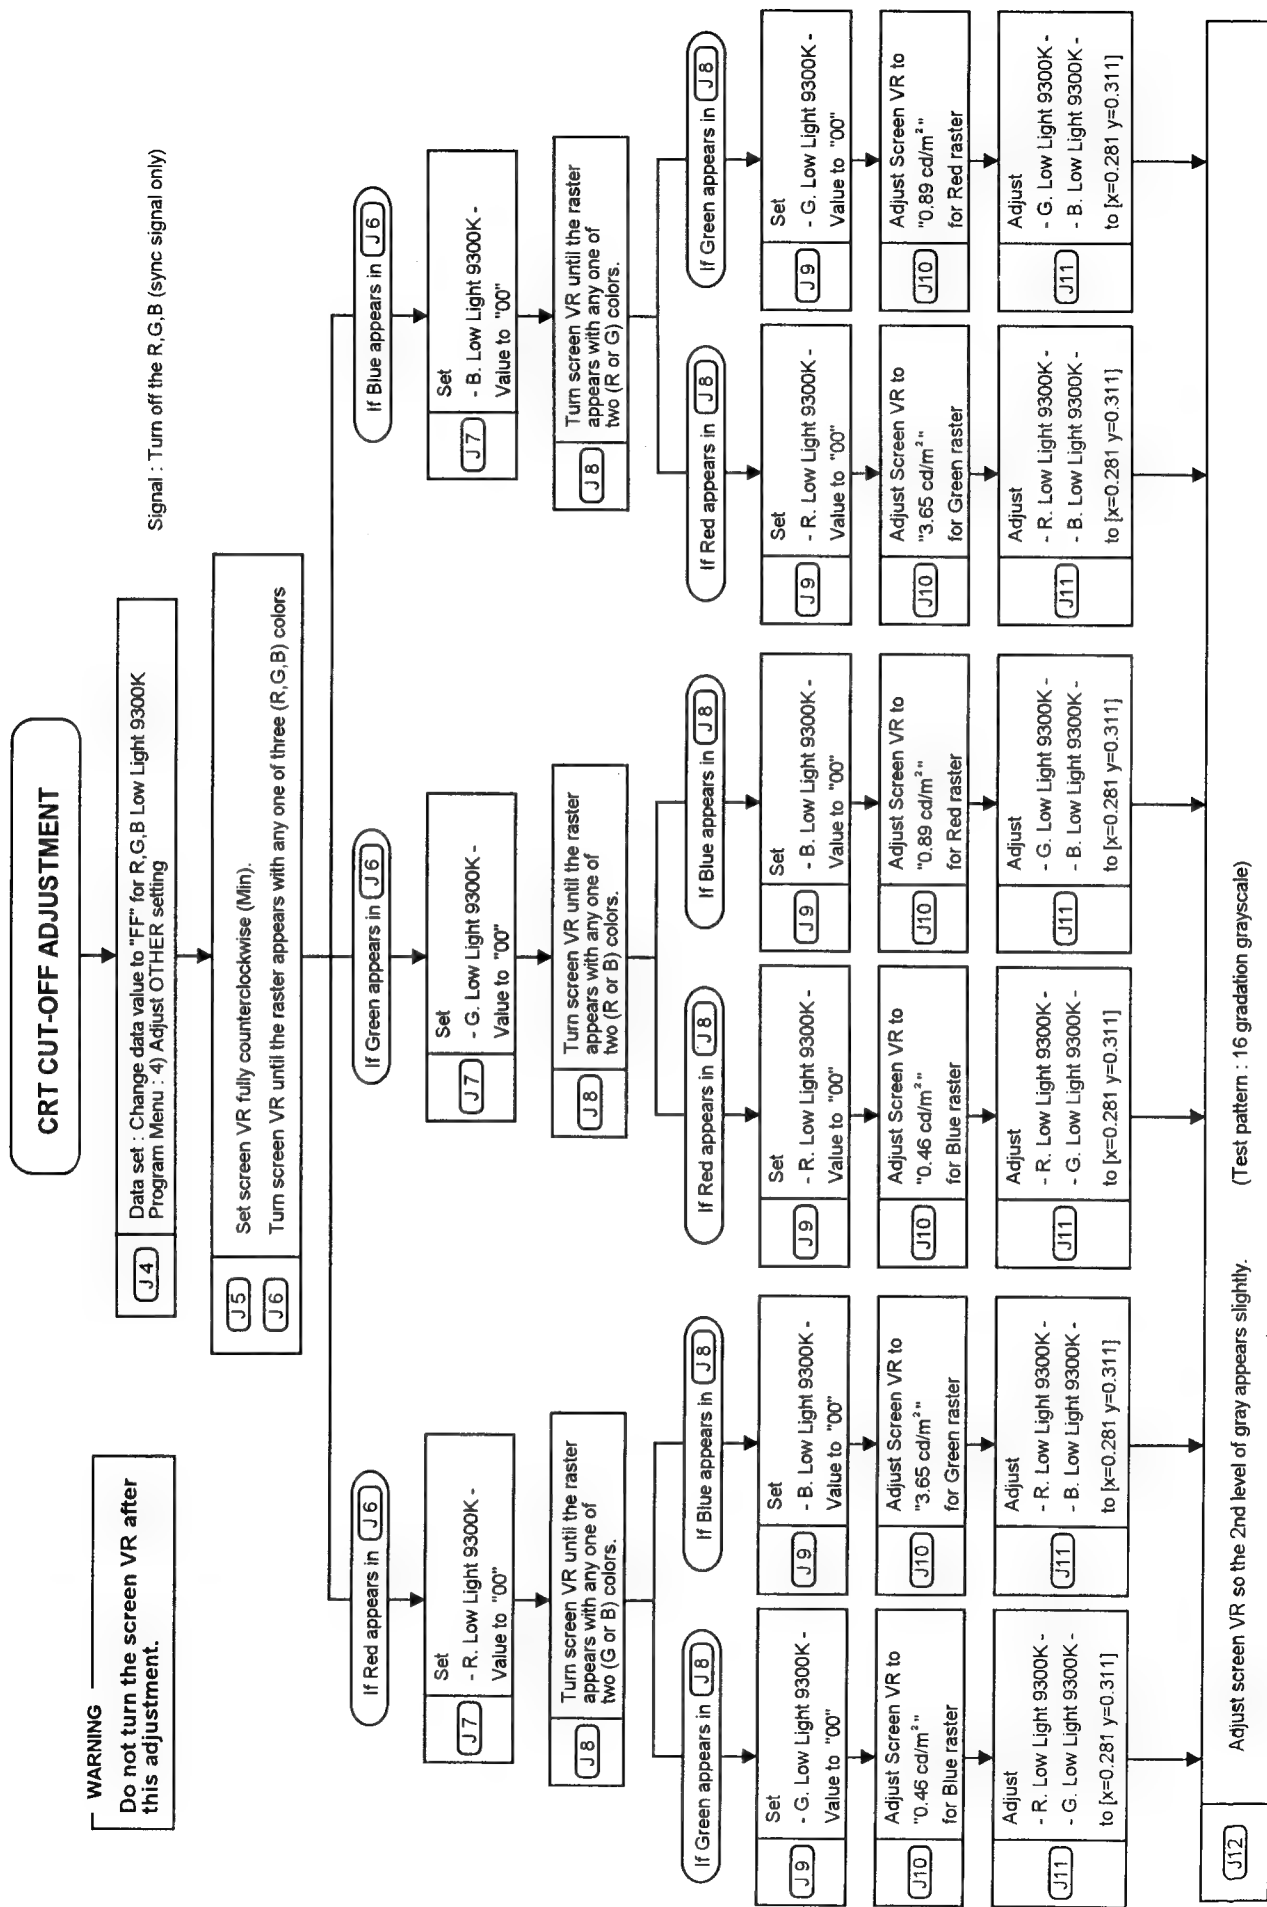

Note 3 : The underlined places indicate the adjustment items on the screen of the PC.

ITEM Program Menu		◇ Test Meter ▼ Test Point □ Pattern	JOB CODE	Input Signal	Operation	Adjusting Value
K	FOCUS	□ Character	K1	MODE-2	Check that the input signal to the monitor is [fH 60.0KHz] and [fV 75.0Hz]. Make the corner sections of the screen optimum by turning D-FOCUS VR on the FBT. Make the center section optimum by turning S-FOCUS VR on the FBT. Repeat K2 and K3 to make it optimum.	
			K2			
			K3			
			K4			
L	FINAL TUNE 8) Special ADJUST		L1		Set the cell to the menu at left and press  Select the <u>9:FINAL TUNE</u> from the menu. (Step 1):Data tuning. This messages will appear : <loading EEPROM data> ...end <tuning EEPROM data> ... end <saving data to EEPROM> ... end <RECALL data - PRESET data> wait a moment (Step 2):Erase user preset data. Erase All ' user preset data OK ? > Press   , go to L6. (Step 3):Calcalate color data. COLOR 6550K data OK ? > , press   USER COLOR data OK ? > , press   ABL data OK ? > , press   finished . (Hit return key) Press  , go to L8. (Step 4):Set brightness data and flag. BRIGHT click data OK ? > , press   BRIGHT min./max. limiter automatically OK ? > , press   end <SET FLAG> wait a moment ... end tune end . Hit return key ! Press  , return to menu of L2. Press   , to return to the main menu.	
			L2

Make the adjustment to the value shown at right by using <input type="button" value="F4"/> and <input type="button" value="F5"/> . Press <input type="button" value="F4"/> to return to menu of J19, press <input type="button" value="F5"/> to return to the main menu.	Y=110 cd/m ² Y=120 cd/m ²
Should make Final Tune after this adjustment refer to item L on page 31.					

Signal : Turn off the R, G, B (sync signal only)

2. Purity adjustment

The CRT is an ITC assembly, however, here is the explanation for readjustment just in case.

If color shading is apparent, make the following adjustment.

2.1.

- (1) Verify that no unusual magnetic fields are near the Display unit (magnetic screwdrivers, table magnets, etc.). If possible, use a wooden workbench for this procedure.
 - (2) Degauss the magnetism of chassis and CRT with external degaussing coil.
 - (3) Adjust the purity magnet until each of the red, green and blue channels is free of color shading.
- Make the following adjustment if color shading cannot be corrected by the above, or if the CRT or deflection yoke has been replaced.

2.2.

- (1) Keep the convergence yoke and deflection yoke in the positions shown below.

CY tightening torque: 8^{+2}_{-1} kgf-cm

DY tightening torque: 18 ± 2 kgf-cm

- (2) Make sure that this adjustment is done later than 30 minutes after power on.
- (3) Degauss the magnetism of chassis and CRT with an external degaussing coil.
- (4) Verify that static convergence is roughly matched. If it is misaligned, adjust static convergence of Red color and Blue color with Four-pole magnet A. For this adjustment Four-pole magnet B which is with deflection yoke must be put together.

- (5) Remove the wedge from the deflection yoke, and pull the deflection yoke fully to the front.
- (6) Display green color solely with the signal generator. Adjust the purity magnet so that the center of the screen displays a pure green disk. Slide the deflection yoke rearward until the four corners shaded and check its area's uniformity.

- (7) After the adjustment of step 5, readjust the static convergence if some gap was found. Static convergence alignment for this step is to be performed with Four-pole magnet A and Six-pole magnet.
- (8) Display red disk. Adjust the purity magnets so as that red disk is as the center of the screen simultaneously. If red is shifted, move its position in the opposite direction.

- (9) Display Green again. Slide the deflection yoke rearward until the screen appears green on the whole, and fasten it there.
- (10) Confirm purity in each direction by rotating the set to direction of East, West, South, and North after degauss by external degaussing coil.
- (11) If magnetism remains even after the adjustment, use the compensation magnet to obtain purity.

The final confirmation method for purity

In the natural magnetic field, rotate the monitor in the direction of East, West, South and North.

Earth's magnetic field may cause magnetism on the monitor. Confirm that the automatic degaussing circuit built in the monitor can erase the amount of magnetism which was introduced with above rotation.

3. Convergence adjustment

The CRT is an ITC assembly, however, here is the explanation for readjustment just in case.

- (1) Make sure that this adjustment is done later than 30 minutes after power on. Check general ability coarse adjustment and purity adjustment finished.
- (2) Degauss the magnetism of chassis and CRT with degaussing coil. (CRT board also)
- (3) Apply mixed crosshatch signals of red and blue from the signal generator. Nudge the deflection yoke to equal its inclination up and down, right and left with a temporary wedge between CRT and the top of the yoke.
- (4) Match the red and blue images at the center of the screen by rotating the Four-pole magnet A (See STEP-1 in figure for examples). For this adjustment Four-pole magnet A should be put together.
- (5) Apply mixed crosshatch signal of red, blue and green from the signal generator.
- (6) Match the red, green and blue images at the center of the screen by rotating the Six-pole magnet. (See STEP-2 in figure for examples)
- (7) If lines are twisted either lefthand or righthand (See the STEP-3 in figure for examples) perform the following:
 - a. Use Four-pole magnet B to shift convergence of horizontal lines by 5 to 6 mm at the center of the screen. (For twisted lefthand lines, shift blue line downward and red line upward. For twisted righthand lines, shift red line downward and blue line upward. Do not shift convergence of vertical lines.)
 - b. Then realign convergence with Four-pole magnet A.
- (8) Loosen the deflection yoke fastening screw and gently nudge the yoke up and down to achieve the best overall convergence on the edges of the screen (See STEP-4 in figure for examples). Insert wedge at the top of the deflection yoke so that the convergence will not deviate due to an unsteady deflection yoke.
- (9) Gently nudge the yoke from side to side to achieve the best overall convergence on the edges of the screen (See STEP-5 in figure for examples). Insert wedges at the left side and right side of the deflection yoke so that the convergence will not deviate due to an unsteady deflection yoke. (Do not apply silicon adhesive to the wedges to prevent them from slipping out).
- (10) Check that the image is horizontal. If needed, rotate the deflection yoke.
- (11) Recheck the purity adjustment. If purity was adversely affected repeat the purity adjustment, then recheck convergence when finished.
- (12) Retighten the deflection yoke fastening screw. Do not overtighten the screw, as this can damage the CRT.
- (13) Align the horizontal line convergence at the center of the screen with the Differential coil (See STEP-6 in figure for examples).
- (14) Align the horizontal line convergence at the corner and of the screen with the Differential resistor VR-YV. (See STEP-7 in figure for examples).
- (15) Align the center vertical line convergence at the corner of the screen with the Vertical Isotropic Astigmatism resistor VR-YH (See STEP-8 in figure for examples).
- (16) Recheck convergence at the center of the screen. If needed, realign with the Four-pole magnet A and the Six-pole magnet.
- (17) Insert wedges as shown in STEP-9 of figure (at the top, bottom, and right side of the deflection yoke). Secure them with silicon adhesive and polyester tape. Remove any temporary wedges while keeping convergence aligned.
- (18) If the convergence on the fringe areas is still not acceptable, place one or more Permalloys around the funnel to achieve the best effect. Then press these Permalloys onto the funnel. Verify convergence around all edges of the screen. (See STEP-10 in figure for examples).

NOTE

In the above step, do not place the Permalloys closer than 20 mm from the HV anode cap. Do not tape them over any paper labels or secure them with silicon adhesive.

- (21) After completion of adjustment, apply locking paint to the movable portions of the deflection and convergence yokes to secure them.
- (22) Make adjustment so that the value of white window pattern from the signal generator is below that under the condition of 100 cd/m² brightness at the standard condition.

Tightening torque: 18 ± 2 kgf·cm

CHECK ITEM

These items are intended for a recheck after adjustment and for a check of the following function operations:

1. Resolution check
2. Brightness variation check
3. Gradation check
4. Brightness check
5. Deflection linearity check
6. Distortion check
7. Image stability check
8. Blinking image check
9. Circuit operation check
10. Specific function check
11. Power save function check

1. Resolution Check

- (1) Apply resolution check pattern.

- (2) Check with the normal signal and inverted signal. Check to be sure that display color between dots is uniform and that there are no color difference and spotty display color.
- (3) Check the entire image quality including resolution.

2. Brightness Variation Check

- (1) Cause the white full dot pattern to be displayed with the standard condition.
- (2) Set the contrast to a maximum. Set the brightness to the center.
- (3) Make sure that a brightness difference between the center and periphery is $<70\%$ with the horizontal magnetic field in the condition of $\pm 30\ \mu\text{T}$.

3. Gradation Check

- (1) Cause the 16 grayscale to be displayed with the standard condition. (White gradation waves.)
- (2) Set the contrast to a maximum and the brightness to the center.
- (3) At this time, the 1st gradation (black level) cannot be seen and the 2nd gradation must be barely lit.
- (4) With the brightness set to the center, vary the contrast from the maximum point the gradation tracking must be good at that time.

Note: If tint (particularly the gray, which is a middle color) is different, make adjustment of the white balance once again.

- (5) With the contrast set to a maximum, vary the brightness from the maximum point to the minimum point and check to be sure that the brightness of the low gradation portion changes.

Note: Check both the color select 9300K and 6550K.

4. Brightness Check

- (1) Cause the white full-flat field pattern to be displayed with the standard condition.
- (2) Make sure that the brightness value is $< 26 \text{ cd/m}^2$ when the contrast is set to a minimum and the brightness to the center.

5. Rotation Check

6. Linearity Check

$$\text{Horizontal linearity} = \frac{X_{\text{max.}} - X_{\text{min.}}}{X_{\text{max.}} + Y_{\text{min.}}} \times 100\% \leq 7\%$$

$$\text{Vertical linearity} = \frac{Y_{\text{max.}} - Y_{\text{min.}}}{Y_{\text{max.}} + Y_{\text{min.}}} \times 100\% \leq 6\%$$

<Conditions>

Display image ---- crosshatch pattern

Maximum and minimum values should not be adjacent to each other.

$X_{\text{max.}}$ is maximum value among $X1 \sim Xm$.

$X_{\text{min.}}$ is minimum value among $X1 \sim Xm$.

$Y_{\text{max.}}$ is maximum value among $Y1 \sim Yn$.

$Y_{\text{min.}}$ is minimum value among $Y1 \sim Yn$.

7. Distortion Check

- (1) Apply the signal of the following mode and supply the green crosshatch pattern.

Mode-1

Mode-2

Mode-3

- (2) Make sure that each value comes within the value indicated above.

• Distortion TRAPEZOID

$$\frac{AC - BD}{AC + BD} \times 100 \leq 1.0 \%$$

$$\frac{AB - CD}{AB + CD} \times 100 \leq 1.0 \%$$

• Pincushion and barrel

$$|C1|, |C2| \leq 2.5 \text{ mm}$$

$$|d1|, |d2| \leq 2.5 \text{ mm}$$

8. Image Stability Check

- (1) Check to be sure that the size variations are <1.5 % when the white full dot pattern of standard condition and the AC voltage is changed to 90 ~ 264 V.
- (2) Make sure that the size variations are <1.5 % when contrast is changed to a minimum from maximum at 26 ~ 110 cd/m².

9. Blinking Image Check

- (1) Apply blinking pattern signal. (100%)

- (2) Check the image stability at standard condition.
Check if image changes due to blinking meets the standards above using the microscope.

10. Circuit Operation Check

- (1) Check the protection operation at fH not covered in the specifications.
- (2) Apply fH = 28 KHz and 71KHz signal and check to be sure that sync flows.

11. Specific Function Check

- (1) Create the crosshatch pattern using the standard condition signal of the preset timing.
- (2) Vary the vertical and the horizontal sizes and check to be sure that the horizontal size and horizontal position variations meet the values given below.

Vertical size	→ +/- 20 mm or more
Vertical position	→ up and down 5 mm or more
Horizontal size	→ MIN. < 280 mm MAX. > full scan
Horizontal position	→ left 40 mm or more
Horizontal position	→ right 40 mm or more

12. Power Save Function Check

The power consumption must meet the specifications when the horizontal/vertical sync signals are changed as shown below.

H. SYNC	OFF	ON	OFF
V. SYNC	ON	OFF	OFF
SPEC	< 30W	< 30W	< 8W

TECHNICAL INFORMATION FOR DDC

- It must be noted that this monitors is designed to be applicable to DDC1 communication the following points are different from ordinary monitors.

1. Use the signal cable, the which is furnished as an accessory (applicable to DDC1) only.
2. When replacing a PCB on which ROM for DDC1 is mounted, data writing is required.
Proprietary interfacing and software is required for reading or writing the data, please contact 1-800-PANASYS for further information.
In addition to the above, a computer applicable to WINDOWS and a 5V power supply unit are required.

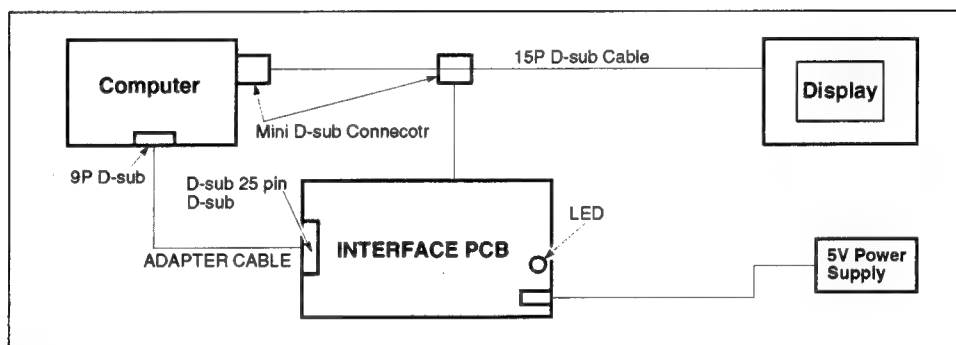

- DDC1 Data Read/write System

1. Communication jig

- (1) The composition of Communication jig

- ① Interface PCB.
 - ② Adapter cable (D-SUB 25P → 9P)
 - ③ 15P D-SUB cable

- (2) Connection diagram for communication jig.

- (3) Procedure to turn on the power:

- ① Make connections as shown above.
 - ② Turn on the computer.
 - ③ Turn on the power supply of communication jig.
 - ④ Turn on the power supply of the MONITOR.

(Note) If the above-mentioned operation is normal, LED of the communication jig turns green after step (4).

If this LED is red, repeat the steps (3) and (4).

- (4) Confirmation of DDC mode

LED is mounted on the communication jig. According to its color, the DDC mode can be discriminated.

- | | |
|------------------------|---------------------|
| - When LED is green. | DDC1 mode. |
| - When LED is orange. | DDC2B mode. |
| - When LED is red. | Transmission error. |
| - When LED is not lit. | Obsolete. |

2. Preliminary arrangements for using DDC data read/write software

- (1) Copy DDC WRITE. EXE from floppy disk to hard disk drive (Name: \PanaTool Directory).

- (2) Register DDC data read/write software (DDCWRITE.EXE) in the Icon.

- ① Click the menu bar "Icon" of the program manager.
 - ② Select "register and group create" from the pull down menu.
 - ③ Select "group create."
 - ④ Name the group PanaTool and register the group.
 - ⑤ Repeat (1) and (2) again and select "Icon registration."
 - ⑥ Enter "DDC1/2B" for [Title] and "Hard disk drive name: \PanaTool\DDCWRITE. EXE" for [Command line]. Then select [OK]

3. How to use DDC data read/write software.

- (1) Start of DDC data read/write software.

Double-click the "DDC1/2B" Icon in the PanaTool group.

- (2) Meaning of a button displayed.

The tool bar indicates the nine icons shown below.

These icons are explained, from left to right :

- Icon ① : Initialization of screen display contents.
 Icon ② : File is opened and displayed on the screen.
 Icon ③ : Data are stored in a file.
 Icon ④ : Finish the DDC data read/write software.
 Icon ⑤ : Data displayed on the screen are written in EEPROM.
 Icon ⑥ : Contents of EEPROM are displayed on the screen.
 Icon ⑦ : Contents of EEPROM are compared with the data displayed on the screen.
 Icon ⑧ : Communication port setting.
 Contents of setting : PORT → Using Communication port No.
 Baud rate → 9600, Data → 8 bits, Parity → Nil, Stop → 1 bits
 Icon ⑨ : Version information display.

- (3) Using the tool bar explained in (2) above, write data in EEPROM and make operations of reading, etc.
 A pop-up window may be displayed on the way. In such a case, select a proper one according to the message.

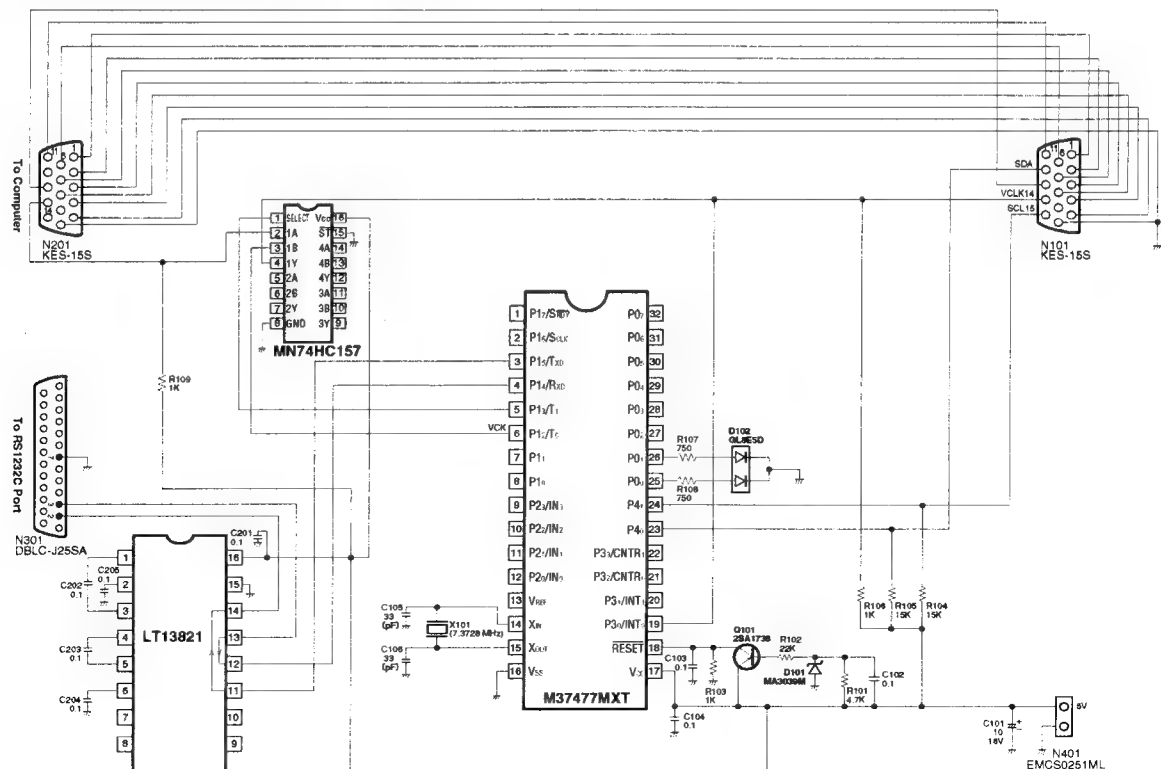

(Example 1) EEPROM data are displayed on the screen.

- ① Click the loon (6th from the left) in the tool bar, with the arrow pointing from the memory chip.
- ② Decided whether reading is started in DDC1 mode or DDC2B mode.
- ③ Select START.

(Example 2) Data displayed on the screen are written in EEPROM.

- ① Click the icon (5th from the left) in the tool bar, with the arrow pointing toward in the memory chip.
- ② Select START.

SCHEMATIC DIAGRAM FOR INTERFACE

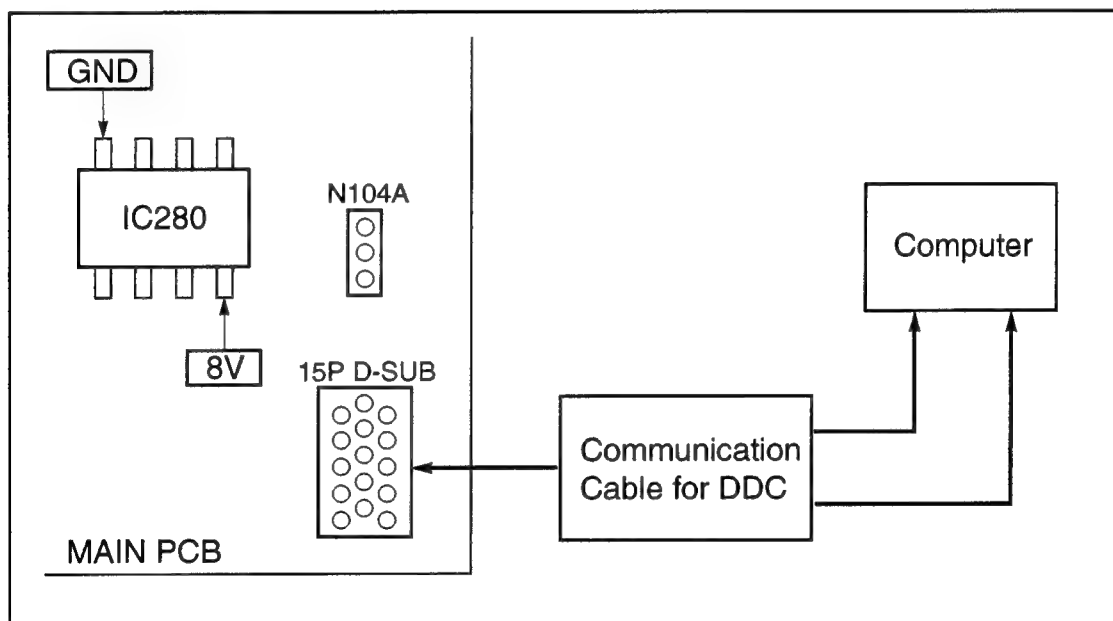

• Data Management

If the main PCB has been replaced, the data of the replaced PCB must be rewritten. The data rewriting procedures are as follows:

- (1) Connect the communication cable for DDC to the defective PCB (15P D-SUB) and PC (9P D-SUB).
- (2) Start the DDC control program.
- (3) Connect the 5-V power line to IC280 (8) and GND to IC280 (4) of the defective PCB respectively.
- (4) Click on ICON (6) in the window to save the data from the monitor.
- (5) Click on ICON (3) to enter file names and save them on the disk.
- (6) Disconnect the 5-V power line and D-SUB connector from the defective PCB.
- (7) Switch on the monitor whose main PCB has been replaced and connect the D-SUB connector back.
- (8) Click on ICON (2) to enter the same file names as in step (4).
- (9) Click on ICON (5) to load the data into the monitor.
- (10) Click on ICON (6) and confirm that the data has been rewritten.

SCHEMATIC DIAGRAM

IMPORTANT SAFETY NOTICE

The component identified by shading or international symbol \triangle on the following schematic diagrams incorporate special features important for protection from X-Radiation, fire and electrical shock hazards. When servicing it is essential that only manufacturer's specified parts be used for those critical components.

NOTES :

1. RESISTOR

All resistors are carbon 1/4W resistor, unless otherwise noted by the following marks.

Unit of resistance is ohm (Ω), (K = 1,000, M = 1,000,000)

- | | |
|---|--|
|  : Non Flammable |  : Solid |
|  : Metal Oxide |  : Metal (Precision and high stability) |
|  : Wire Wound |  : Thermistor |
|  : Fusible |  : Positive coefficient Thermistor |
|  : Flame Proof Rectangular | |

2. CAPACITOR

All capacitors are ceramic 50V capacitor, unless otherwise noted by the following marks.

Unit of capacitance is μF , unless otherwise noted.

- | | |
|--|---|
|  : Electrolytic |  : Polyester |
|  : Tantalum |  : Metalized Polyester |
|  : Bipolar |  : Polypropylene |
|  : Polystyrene |  : Mica |
|  : Temperature Compensation |  : Ceramic |
| |  : Ceramic (SL) |

3. COIL

Unit of inductance is μH , unless otherwise noted.

4. VOLTAGE MEASUREMENT

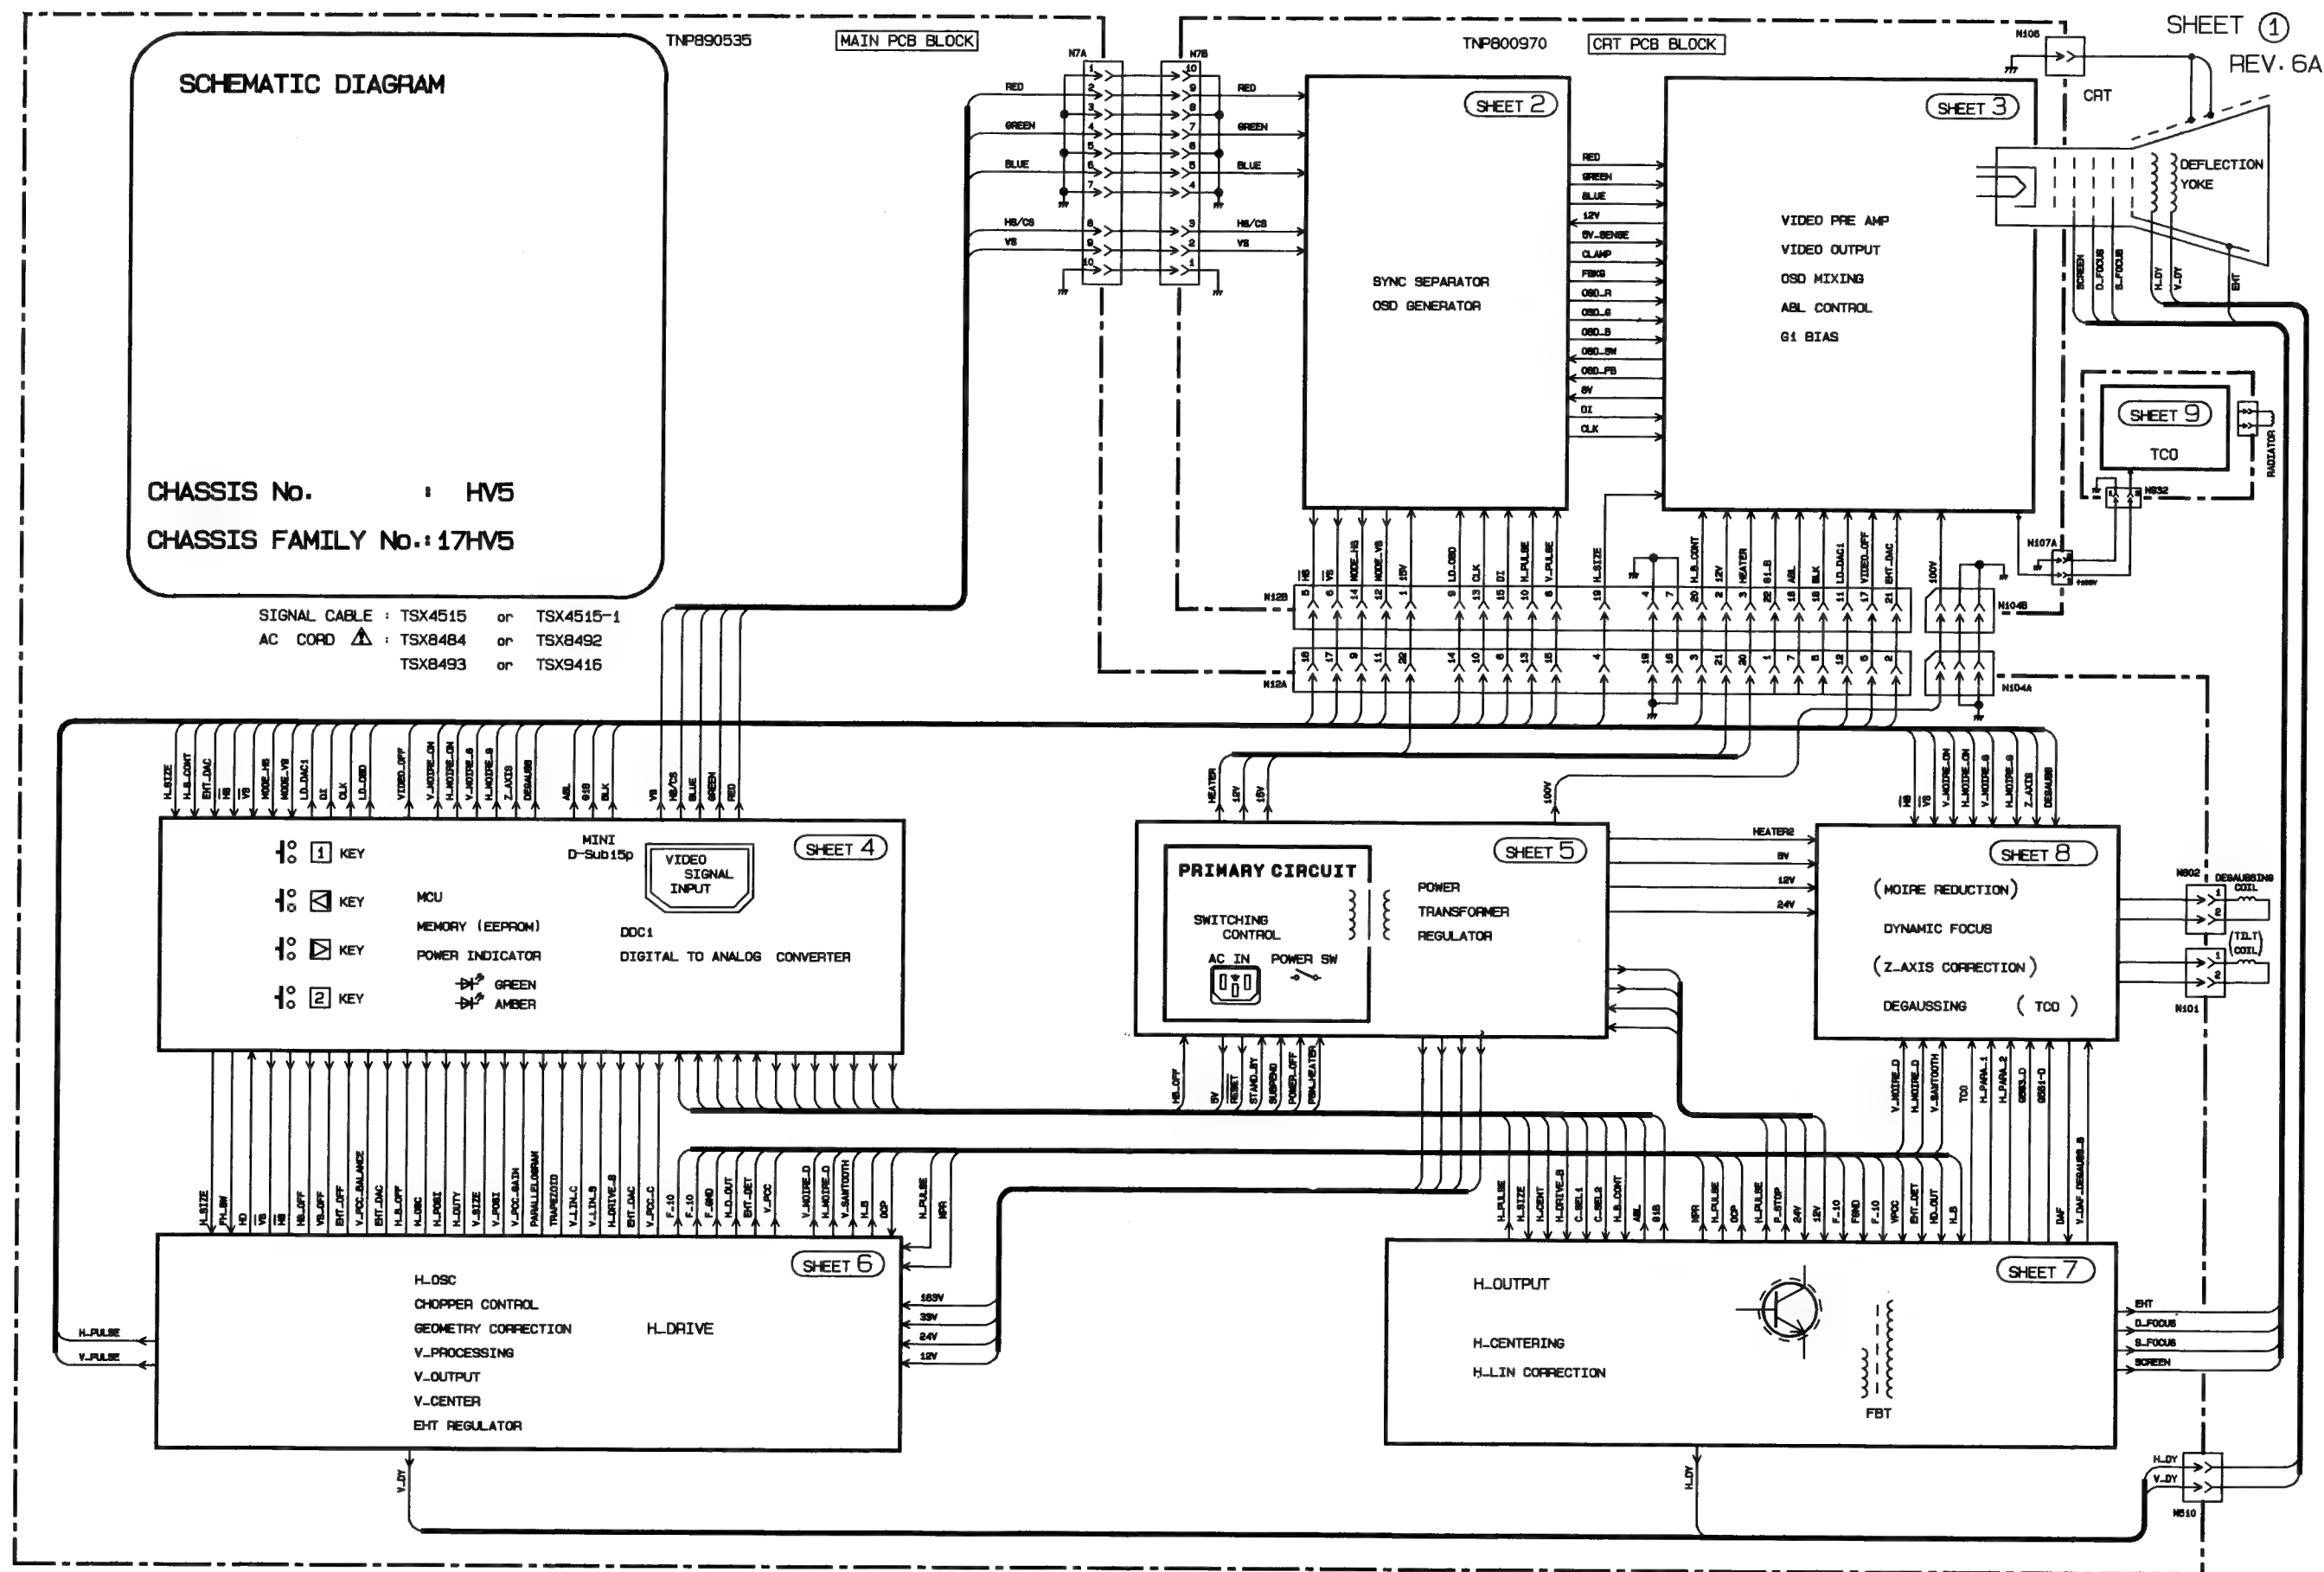

Voltage is measured by a digital meter receiving normal signal.

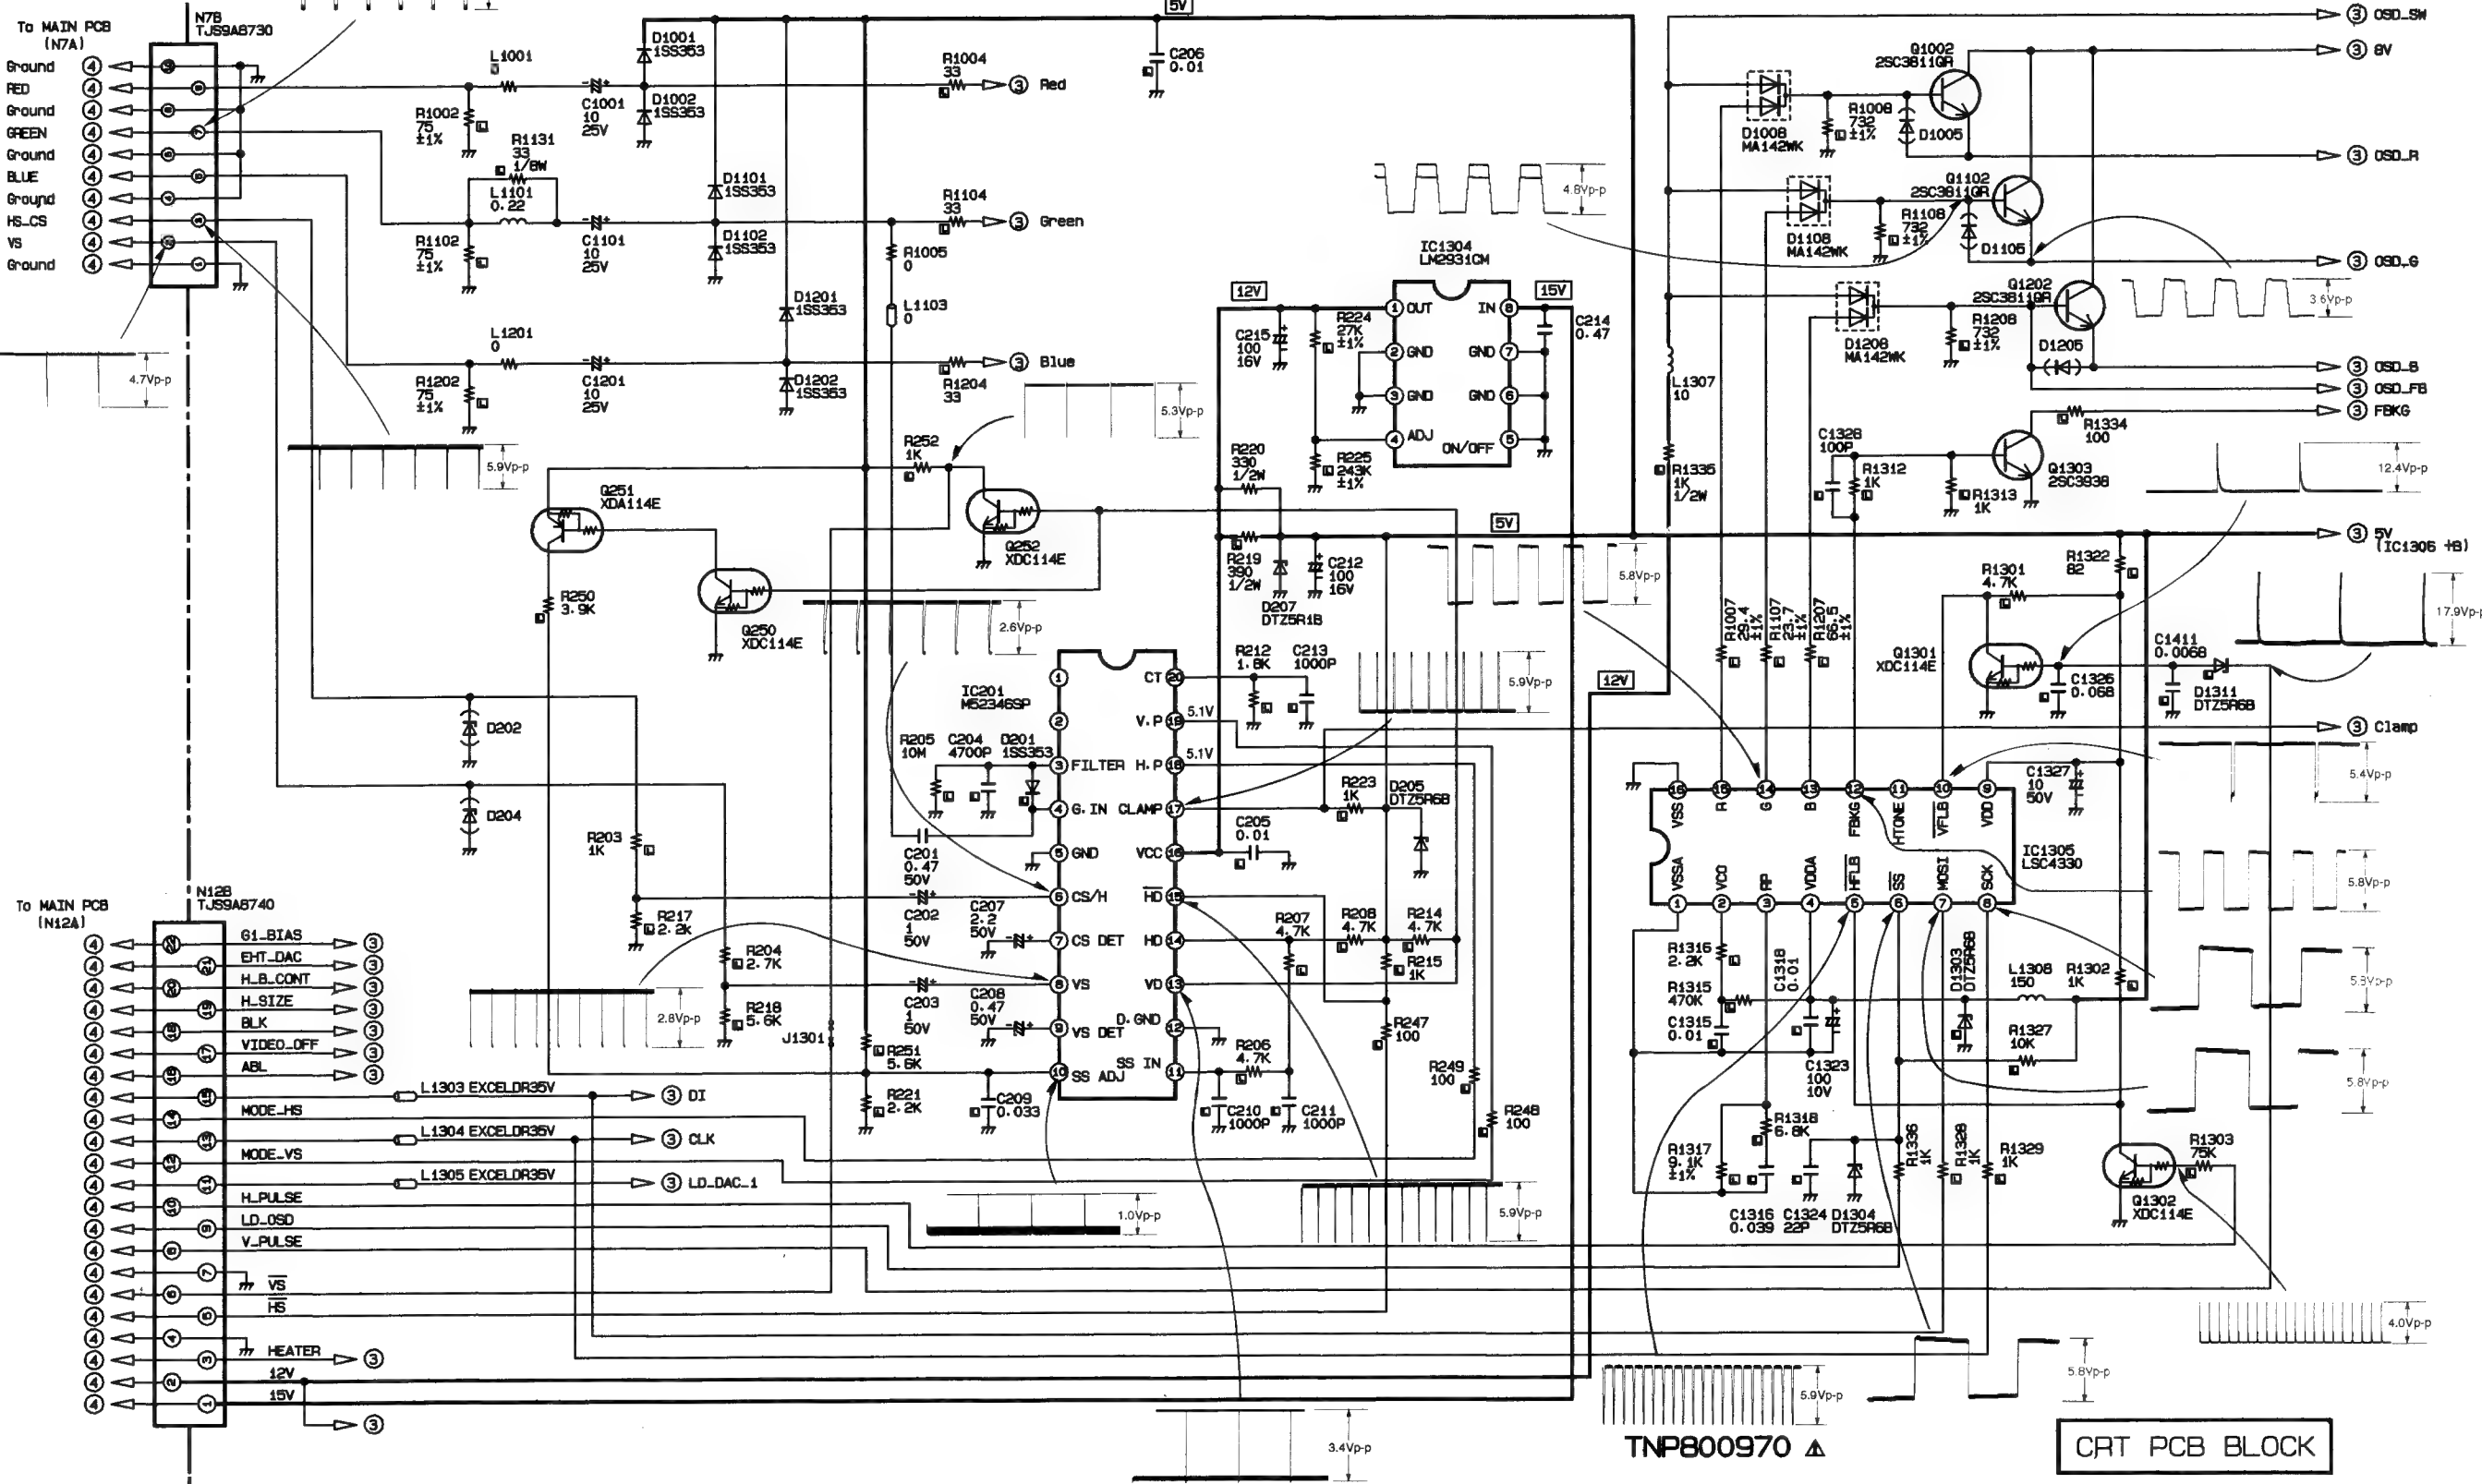

5. This schematic diagram is the latest at the time of printing and is subject to change without notice.

SERVICE NOTES :

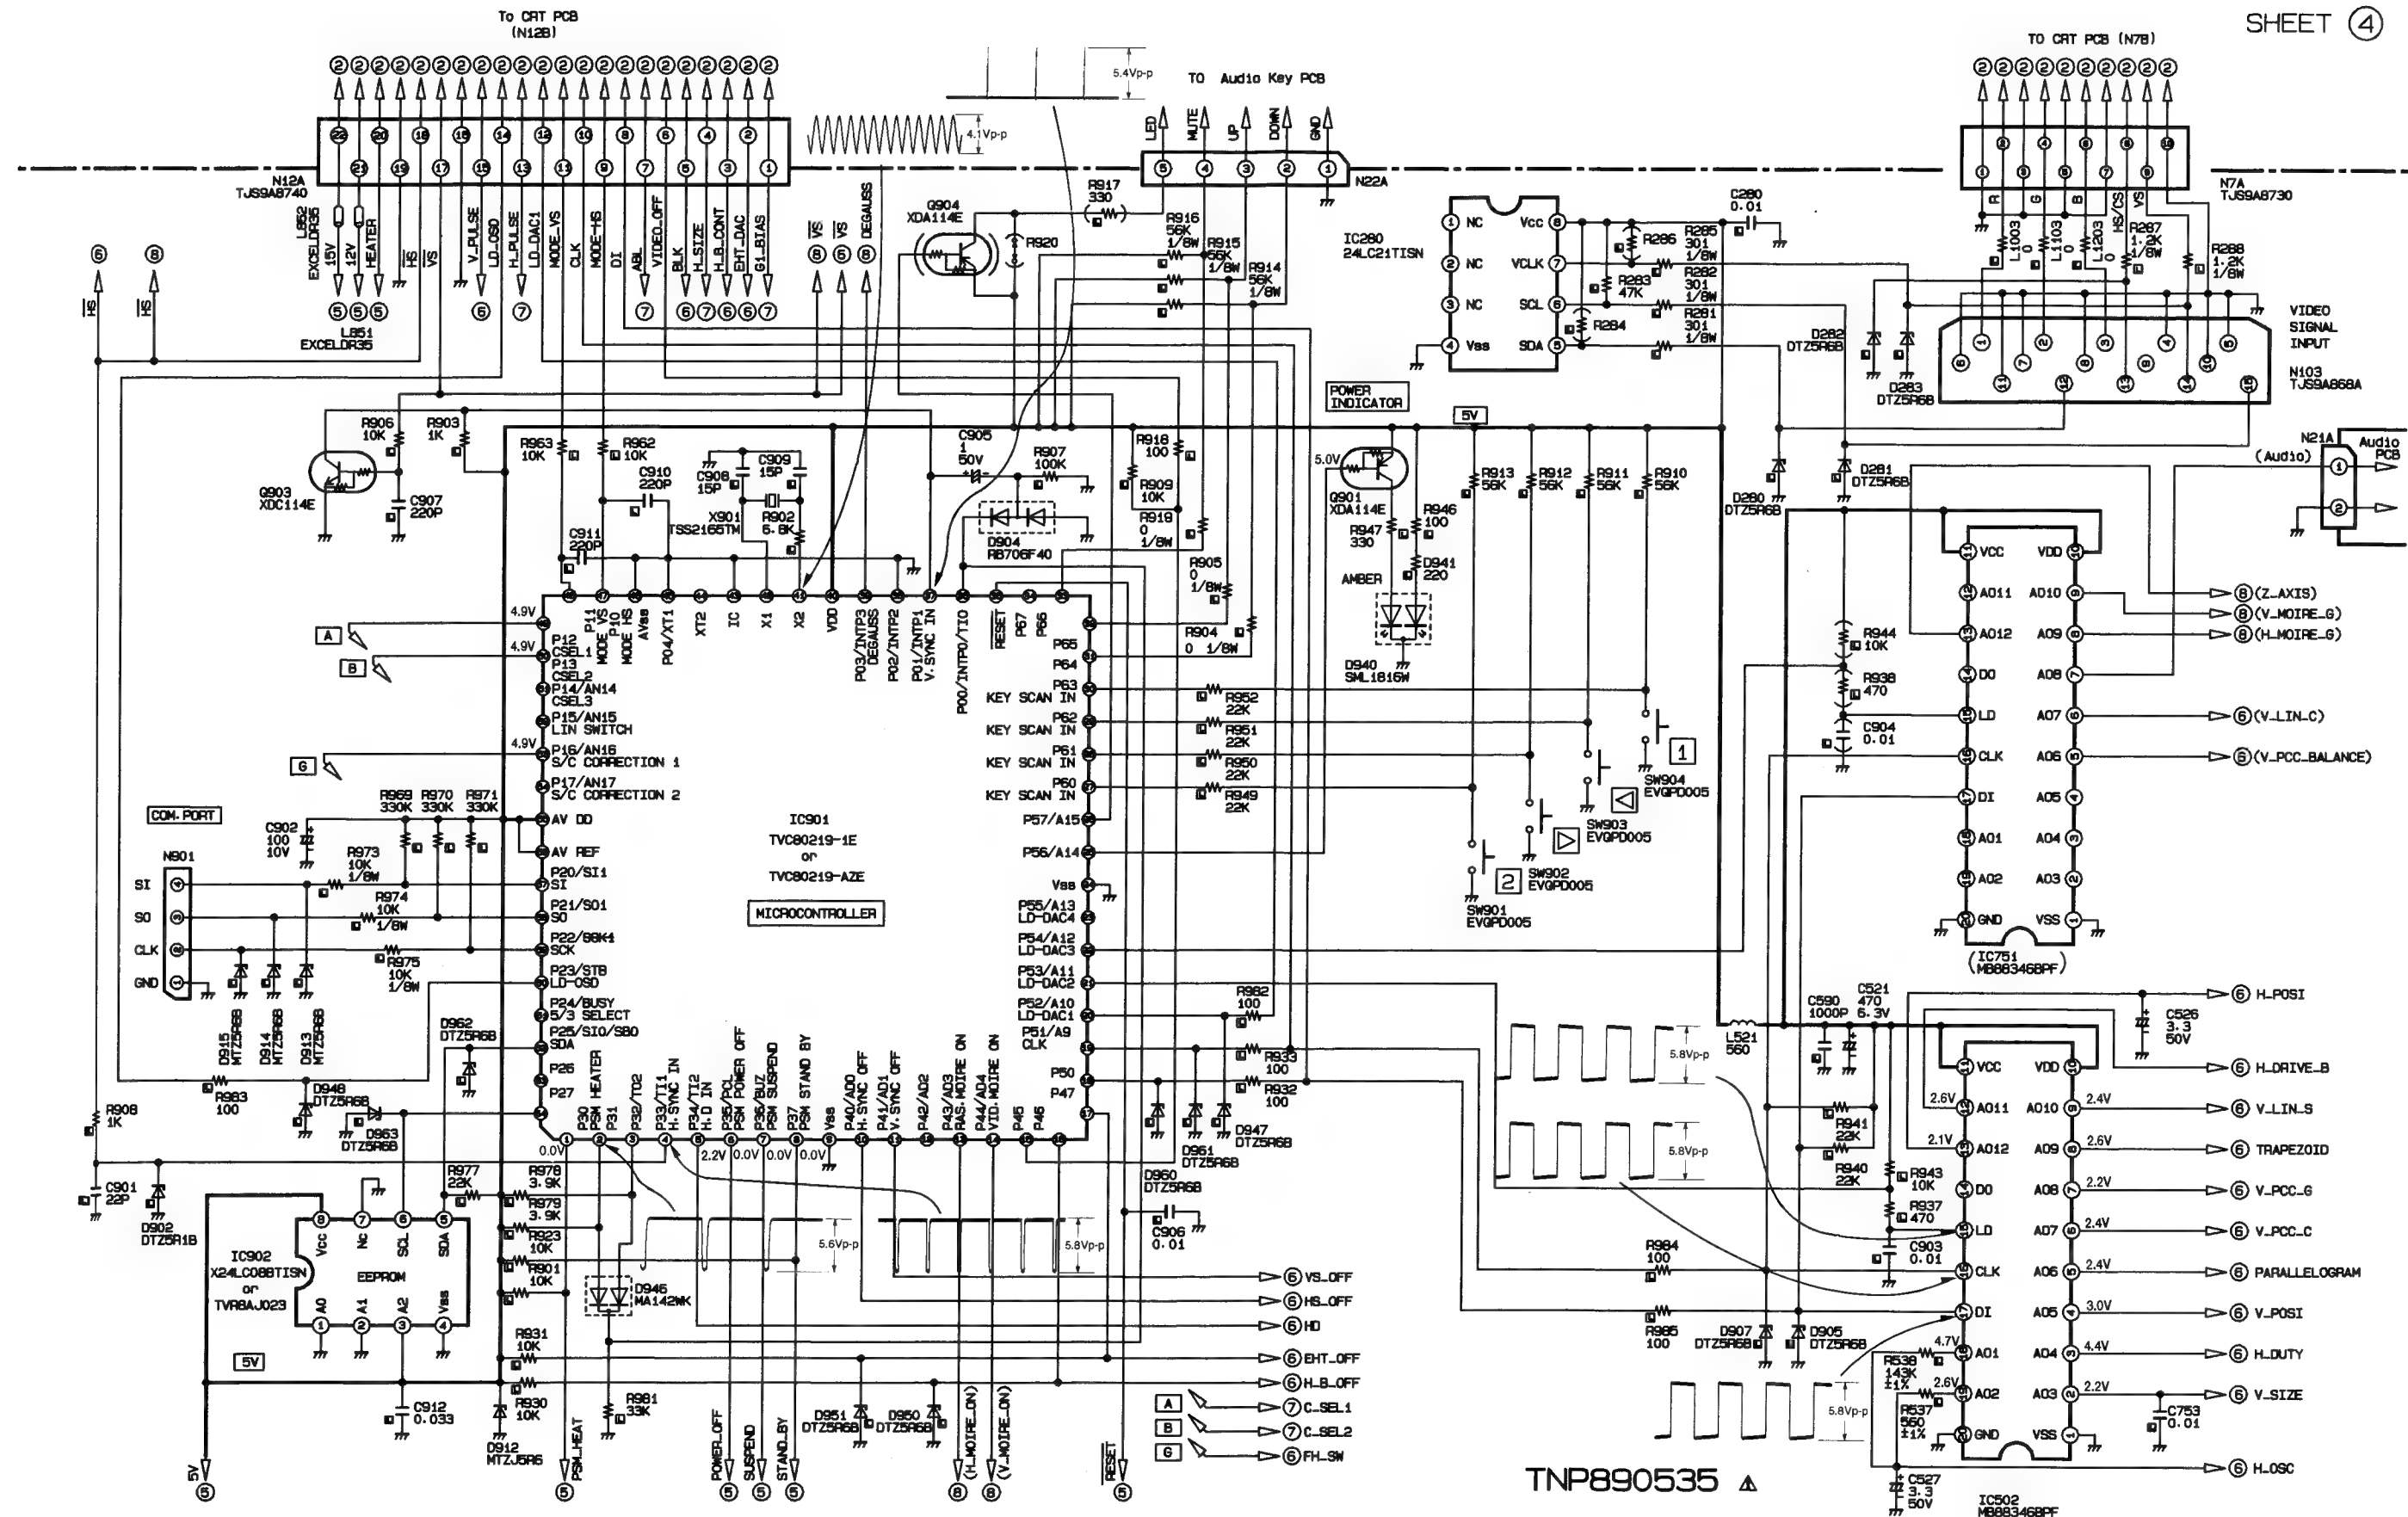

This model has a section that does not share a common ground with the power supply section. The different sections are referred to as the HOT section and the COLD section in the precautions below.

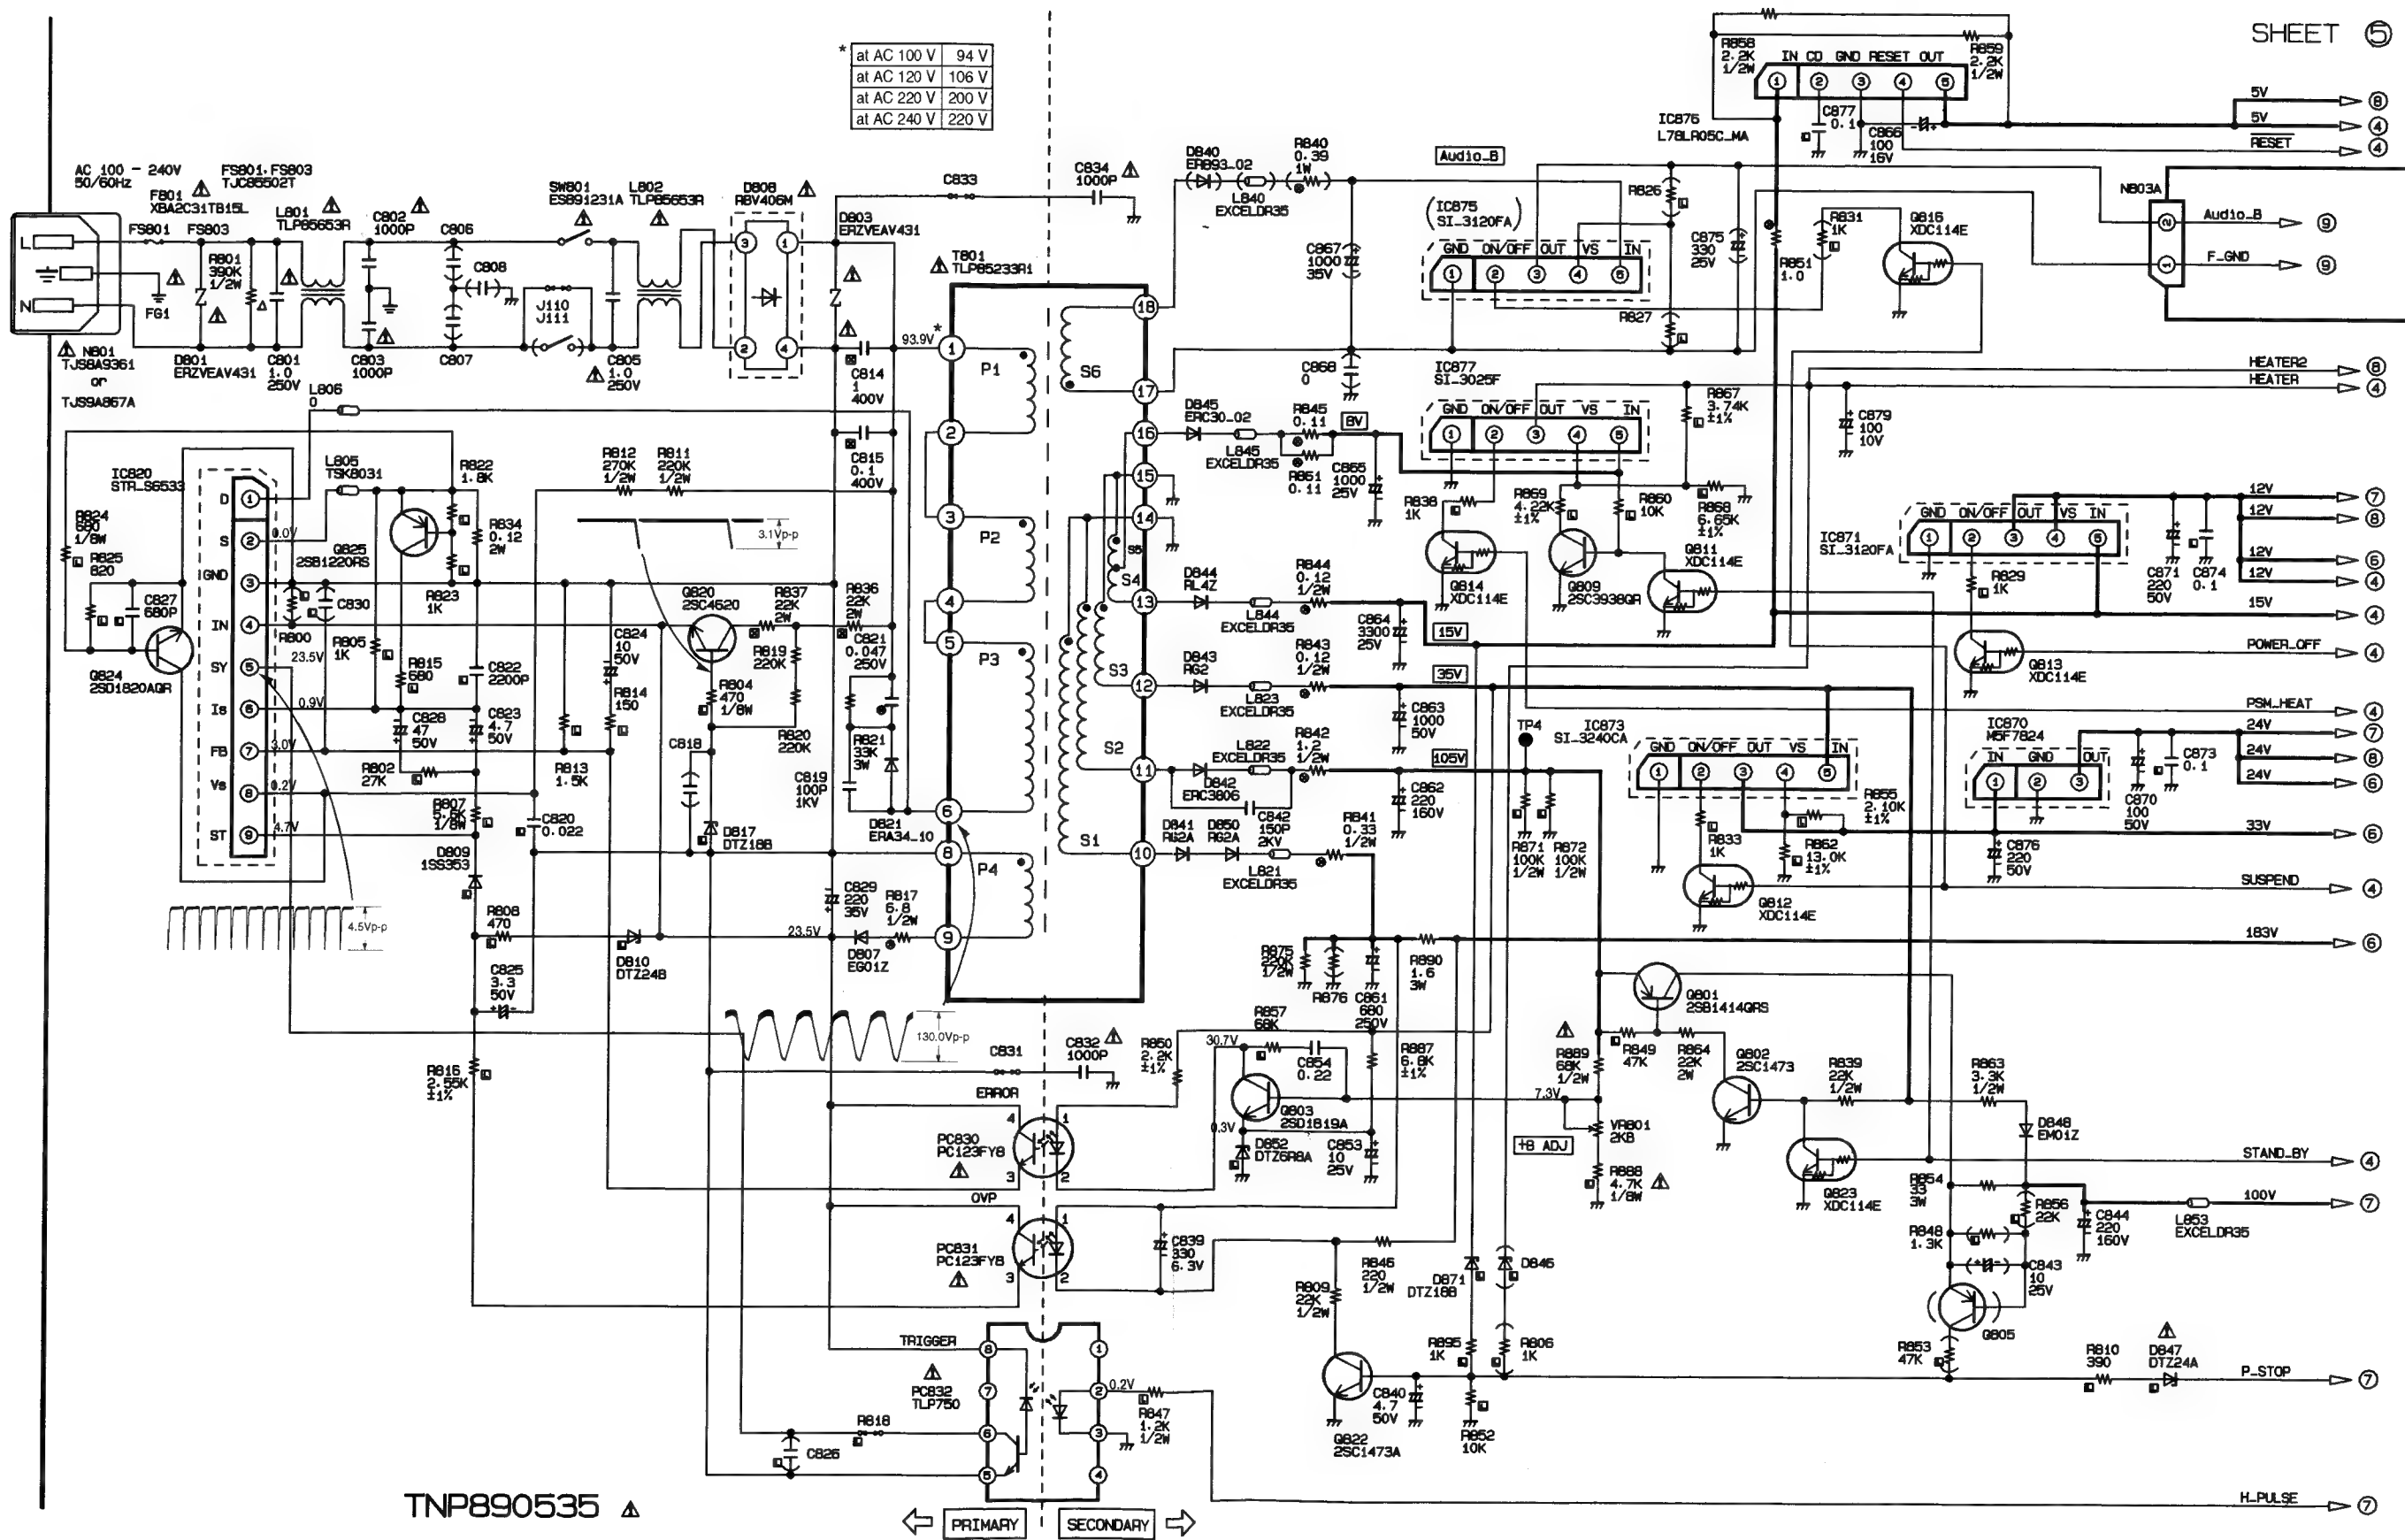

1. Do not touch the HOT section and the COLD section at the same time. You may receive an electric shock.
2. Do not short the HOT section to the COLD section. This could blow the fuse or damage parts.
3. Never measure the HOT section and the COLD section at the same time when using tools such as oscilloscopes or multi-meters.
4. Always unplug the unit before beginning any operation such as removing the chassis.
